NEW QUESTION: 1
Of the two types of energy transfer, which type would a Motor Vehicle crash (MVC) with frontal impact, non-restrained driver with bent steering wheel and spidered windshield?
A. Decelerating
B. Low velocity penetrating
C. High velocity penetrating
D. Blunt
Answer: D
Explanation:
Explanation/Reference:
Explanation:
Blunt trauma is just not getting stabbed or shot. Blunt trauma is any injury which is caused by something sticking the human body and having energy transferred to the human body. Blunt trauma can be caused by decelerating injury like a front end impact of a car against a tree.

Answer: A,C

NEW QUESTION: 4
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section. You will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have a table named Products that stores information about products your company sells. The table has a column named ListPrice that stores retail pricing information for products. Some products are used only internally by the company. Records for these products are maintained in the Products table for inventory purposes. The price for each of these products is $0.00. Customers are not permitted to order these products.
You need to increase the list price for products that cost less than $100 by 10 percent. You must only increase pricing for products that customers are permitted to order.
Solution: You run the following Transact-SQL statement:

Does the solution meet the goal?
A. Yes
B. No
Answer: A
