### **NEW QUESTION: 2**

Which of the following statements accurately describes one of the characteristics that distinguishes a multinational company from a domestic company?

**A.** A multinational company operates outside of its country of origin.

**B.** A multinational company uses raw materials and components from more than one country.

**C.** A multinational company exports its products to other countries.

**D.** A multinational company has stockholders in other countries.

**Answer: A**

### **NEW QUESTION: 3**

Your network contains an Active Directory domain named contoso.com that syncs to Azure Active Directory (Azure AD).

The Active Directory domain contains 200 computers that run Windows 10. The computers are managed by using Microsoft System Center Configuration Manager (Current Branch).

You need to pilot co-management for only five of the computers.

What should you create first?

**A.** a dynamic device group in Azure AD

**B.** a domain local distribution group in Active Directory

**C.** an Intune Connector for Active Directory

**D.** a device collection in Configuration Manager

**Answer: D**

## Explanation:

The Pilot Intune setting switches the associated workload only for the devices in the pilot collection.

Note: When you enable co-management, you'll assign a collection as a Pilot group. This is a group that contains a small number of clients to test your co-management configurations. We recommend you create a suitable collection before you start the procedure. Then you can select that collection without exiting the procedure to do so.
