Incorrect Answers:

A: For column Reason we must use nvarchar, not varchar, as multilingual values must be supported.

B: We cannot use INT for the Id column as new values must be automatically generated.

C: For column Reason we must use nvarchar, not varchar, as multilingual values must be supported.

Note: Nvarchar stores UNICODE data. If you have requirements to store UNICODE or multilingual data, nvarchar is the choice. Varchar stores ASCII data and should be your data type of choice for normal use.

Explanation

Box 1: `var cache = connection.GetDatabase();`

Once the connection is established, return a reference to the redis cache database by calling the `ConnectionMultiplexer.GetDatabase` method.

Box 2: `cache.SetString("color", colorSelection, TimeSpan.FromMinutes(90));` The `TimeSpanFromMinutes` method returns a `TimeSpan` that represents a specified number of minutes, where the specification is accurate to the nearest millisecond.

Example: The following code snippet shows how to set an expiration time of 90 minutes on a key.

// Add a key with an expiration time of 90 minutes

```
await cache.SetStringAsync("data:key1", 99, TimeSpan.FromMinutes(90));
```
