You have two databases named DB1 and DB2 that are located on the same server.

You plan to create a stored procedure named SProc1 in DB1. SProc1 will query a table named Table2 in

DB2. You need to recommend a solution to ensure that SProc1 can access Table2 without granting users

direct access to Table2.

What should you include in the recommendation? More than one answer choice may achieve the goal.

Select the BEST answer.

- A. Digital certificates
- B. Cross-database ownership chaining
- C. Contained databases
- D. Application roles

Answer: D

Explanation:

Explanation/Reference:

Explanation:

An application role is a database principal that enables an application to run with its own, userlike

permissions. You can use application roles to enable access to specific data to only those users who

connect through a particular application. Unlike database roles, application roles contain no members and

are inactive by default.
