NEW QUESTION: 1

What is the best defense against Distributed DoS Attack?

- A. None of the choices.
- B. find the DoS program and kill it.
- C. run an anti-spy software.
- D. run a virus checker.
- E. patch your systems.

Answer: E

Explanation:

Distributed DoS Attack is a network-based attack from many servers used remotely to send packets. Examples of tools for conducting such attack include TFN, TFN2K, Trin00, Stacheldracht, and variants. The best defense is to make sure all systems patches are up-to-date. Also make sure your firewalls are configured appropriately.

NEW QUESTION: 2

- A. Option C
- B. Option B
- C. Option D
- D. Option A

Answer: C

NEW QUESTION: 3

CORRECT TEXT

An administrator wants to install a patch to an application. Given the scenario, download, verify and install the patch in the most secure manner.

Instructions: The last install that is completed will be the final submission.

Answer:

Explanation:

In this case the second link should be used (This may vary in actual exam). The first link showed the following error so it should not be used.

Also, Two of the link choices used HTTP and not HTTPS as shown when hovering over the links as shown:

Since we need to do this in the most secure manner possible, they should not be used.

Finally, the second link was used and the MD5 utility of MD5sum should be used on the install.exe

file as shown. Make sure that the hash matches.

Finally, type in install.exe to install it and make sure there are no signature verification errors.

Explanation:

We use the MD5Sum utility to view the hash of the downloaded file. If the hash matches the hash shown on the download page, then we know that the file we are downloading has not been modified.

md5sum is a computer program that calculates and verifies 128-bit MD5 hashes, as described in RFC 1321. The MD5 hash (or checksum) functions as a compact digital fingerprint of a file.

Virtually any non-malicious change to a file will cause its MD5 hash to change; therefore

md5sum is used to verify the integrity of files. Most commonly, md5sum is used to verify that a file has not changed as a result of a faulty file transfer, a disk error or non-malicious meddling.

The md5sum program is installed by default in most Unix, Linux, and Unix-like operating systems or compatibility layers. Other operating systems, including Microsoft Windows and BSD variants - such as Mac OS X - have similar utilities.
