NEW QUESTION: 3

What technique is used to prevent eavesdropping of digital cellular telephone conversations?

A. Call detail suppression

B. Encryption

C. Authentication

D. Time-division multiplexing

Answer: D

Explanation:

The name "TDMA" (Time Division Multiple Access) is also used to refer to a specific second generation mobile phone standard - more properly referred to as IS-136, which uses the TDMA technique to timeshare the bandwidth of the carrier wave. It provides between 3 to 6 times the capacity of its predecessor AMPS, and also improved security and privacy. In the United States, for example, AT&T Wireless uses the IS-136 TDMA standard. Prior to the introduction of IS-136, there was another TDMA North American digital cellular standard called IS-54 (which was also referred to just as "TDMA").
