#### **NEW QUESTION: 3**

Topic 1, Company One

This question is one in a series of questions that all present the same scenario. For your convenience, the

scenario is repeated in each question. (Click the Case Study button.)

Each question presents a different goal and answer choices, but the text of the scenario is

exactly the same

in each question in this series.

You are designing an implementation of BitLocker. You create a GPO with BitLocker settings that conform

to company requirements.

You need to design an implementation strategy that supports the company requirements.

What should you do? (Choose all that apply.)

Company, Inc. (Case Study): Background

You are the desktop architect for a company with 14,000 client computers. Some client computers are portable computers and some are desktop computers. All client computers currently run Windows XP.

You are in the evaluation phase for upgrading to Windows 7. Approximately half of the Carlsbad and Madrid offices are used by sales employees. Sales employees report to the office only once per quarter. Your company has users in offices as shown in the following table.

The address for the SharePoint site is <https://intranet.company.com>.

Each location has gigabit network connections to the desktop except Madrid, which has 100 megabit connections. Each office has a Dynamic Host Configuration Protocol (DHCP) server and uses multiple VLANs.

You use Group Policy objects (GPOs) to manage various settings. The following figure displays the Organizational Unit (OU) layout for the Active Directory Domain Services (AD DS) domain.

Each office has two connections, a data center WAN link and an Internet connection. Each office connects to a central data center facility with connection speeds as shown in the following table.

You currently use one of each client computer model to create and maintain a disk image for each model. The models supported by your company are listed in the following table.

You currently use a third-party disk imaging application to capture and deploy new Windows XP computers.

Desktop administrators use optical media to deploy the image to new or repurposed client computers. The current Windows XP image is about 11 GB in size, which includes 2 GB of applications and 9 GB of Windows XP files.

Business Requirements

The deployment of Windows 7 must meet the following business requirements:

Deployment requirements

The deployment must maximize the use of existing client computers. The deployment must reduce the amount of time spent updating client computers after deployment.

Technical Requirements

The application must meet the following technical requirements:

Infrastructure requirements

The amount of disk space required to store deployment images must be reduced. The number of images that need to be copied across WAN links must be reduced. You are based in the Los Angeles office and use the Microsoft Deployment Toolkit. You have a file server hosting a deployment share in Los Angeles.

Application compatibility

All current applications must be supported on Windows 7.

All offices are moving to a new finance application in the next six months. The new finance application

installs and runs correctly on Windows 7.

Migration requirements

The deployment cannot require users to store their files on a network or external drive for the

migration. Only system administrators can be allowed to install applications. User data must be migrated during upgrades to Windows 7. There is a small budget for hardware upgrades when required.

Image maintenance

You need to minimize the re-arm passes.

Security

Each location has a security group made up of the desktop computer objects in that location.

Users must

not be able to change their web browser or client computer security settings.

Your requirements are as follows:

A startup PIN and TPM are required for all BitLocker users.

Local regulations prohibit the use of BitLocker for all computers in the Munich office. This supersedes any other requirement.

All laptops within the company must have BitLocker enabled.

All Madrid desktops must have BitLocker enabled.

No other desktops besides Madrid should have BitLocker enabled.

Computers in office lobbies are not permitted to join the domain.

You need to block the use of ActiveX controls for all external websites.

**A.** Link the GPO to the root of the AD DS domain.

**B.** Create and use a WMI filter that targets all portable computers with the GPO. Link the WMI filter to the GPO.

**C.** Link the GPO to the Madrid-Computers OU. Use a security filter to apply the GPO to all Madrid desktop computers.

**D.** Link the GPO to the Munich-Computers OU. Use a security filter to apply the GPO to all Munich desktop computers.

**E.** Block the Munich-Computers OU from inheriting policies.

**F.** Link the GPO to the Munich-Users OU.

**Answer: A,B,C,E**

#### **NEW QUESTION: 4**
