NEW QUESTION: 2

What two things will a router do when running a distance vector routing protocol? (Choose two.)

- A. Use the shortest-path algorithm to determine best path.
- B. Maintain the topology of the entire network in its database.
- C. Update the routing table based on updates from their neighbors.
- D. Send entire routing table to all routers in the routing domain.
- E. Send periodic updates regardless of topology changes.

Answer: C,E

Explanation:

Explanation/Reference:

Explanation:

Distance means how far and Vector means in which direction. Distance Vector routing protocols pass periodic copies of routing table to neighbor routers and accumulate distance vectors. In distance vector routing protocols, routers discover the best path to destination from each neighbor. The routing updates proceed step by step from router to router.
