NEW QUESTION: 1

The need for computer forensics is highlighted by an exponential increase in the number of cybercrimes and litigations where large organizations were involved. Computer forensics plays an important role in tracking the cyber criminals. The main role of computer forensics is to:

- A. Extract, process, and interpret the factual evidence so that it proves the attacker's actions in the court
- B. Document monitoring processes of employees of the organization
- C. Maximize the investigative potential by maximizing the costs
- D. Harden organization perimeter security

Answer: A

NEW QUESTION: 2

The author's overall concern is with describing the process researchers are following to identify the genes responsible for preventing cell death and with the direction (and goals) of current research based on their findings. Of the five choices, choice B best expresses the gist of the discussion. enterprise was prepared for privatization and which form was most suitable for it. Slow privatization, some claim, is the only way to establish true private ownership, because only those who must pay for enterprise-ownership rights will be engaged in its management. But this method would only prolong the core problems of inefficiency and misallocation of labor and capital, and hence either of two approaches to rapid privatization is preferable. Under one such approach, shares of an enterprise would be distributed among its employees, who would become its owners. This socialist reform method is deeply flawed; it discriminates in favor of workers who happen to be employed by modern, efficient enterprises, and it jeopardizes workers' property by requiring them to invest in the same enterprise in which they are employed, rather than diversifying their investments. The better approach involves distribution of enterprise shares, free of charge, among all the people by means of vouchers - a kind of investment money. Some critics charge that voucher holders would not be interested in

how their enterprises are managed - as may be true of small corporate shareholders in capitalist countries who pay little attention to their investments until the corporation's profits wane, at which time they rush to sell their securities. But while the resulting fall in stock prices can be perilous for the corporation, this very pressure is what drives private firms toward efficiency and profitability. Other detractors predict that most people will sell their vouchers to foreign capitalists.

However, these skeptics ignore the capacity of individuals to compare the future flow of income secured by a voucher to the benefits of immediate consumption. Moreover, even if an individual should decide to sell, the aim of voucher privatization is to secure equality not of property but of opportunity.

Which of the following would the author probably agree is the LEAST desirable outcome of economic reform in formerly Communist countries?

- A. Equitable distribution of property among citizens
- B. Equal opportunity for financial success among citizens
- C. Financial security of citizens
- D. Effective allocation of labor
- E. Financial security of private enterprises

Answer: E

The author's willingness to place a private enterprise at risk for the broader purpose of achieving a freemarketsystem is suggested by at least two areas of discussion in the passage. In the first paragraph, the author tacitly disagrees with the gradualists who favor bracing enterprises for the shock of deregulation to help them survive the transition. In the final paragraph, while advocating voucher privatization, the author admits that this approach may very well result in the instability of stock prices; yet the author seems to view the insecurity caused by market pressures as good for private enterprises in that it will drive them to efficiency - a sort of sink-or-swim approach.

NEW QUESTION: 3

- A. Option C
- B. Option A
- C. Option B
- D. Option D

Answer: B

Explanation:

Agents are applications that reside on client machines logging into the Cisco ISE network. Agents can be persistent (like the AnyConnect, Cisco NAC Agent for Windows and Mac OS X) and remain on the client machine after installation, even when the client is not logged into the network. Agents can also be temporal (like the Cisco NAC Web Agent), removing themselves from the client machine after the login session has terminated.
