Answer: E

NEW QUESTION: 3

HOTSPOT

You have an application that uses three separate databases to store application data, logs, and application security details. The maximum database throughput unit (DTU) per database does not exceed 50. You plan to deploy the application to Azure.

You need to recommend a configuration for the databases that minimizes costs. For each requirement, which configuration option should you use? To answer, select the appropriate configuration option from each list in the answer area.

Answer:

Explanation:

NEW QUESTION: 4

You need to resolve the Active Directory issue.

What should you do?

A. From Active Directory Users and Computers, select the user accounts, and then modify the User Principal Name value.

B. From Active Directory Domains and Trusts, modify the list of UPN suffixes.

C. From Azure AD Connect, modify the outbound synchronization rule.

IdFix is used to perform discovery and remediation of identity objects and their attributes in an on-premises Active Directory environment in preparation for migration to Azure Active Directory. IdFix is intended for the Active Directory administrators responsible for directory synchronization with Azure Active Directory.

Scenario: Active Directory Issue

Several users in humongousinsurance.com have UPNs that contain special characters.

You suspect that some of the characters are unsupported in Azure AD.
