**NEW QUESTION: 3**

Which statement is correct concerning the trusted network detection (TND) feature?

- A. If enabled, and a CSD scan determines that a host is a member of an untrusted network, an

administrator can configure the TND feature to prohibit an end user from launching the Cisco AnyConnect VPN Client.

**B.** The Cisco AnyConnect 3.0 Client supports TND on Windows, Mac, and Linux platforms.

**C.** When the user is inside the corporate network, TND can be configured to automatically disconnect a Cisco AnyConnect session.

**D.** With TND, one result of a Cisco Secure Desktop basic scan on an endpoint is to determine whether a device is a member of a trusted or an untrusted network.

**Answer: C**

Explanation:

Explanation

[http://www.cisco.com/en/US/docs/security/vpn\\_client/anyconnect/anyconnect25/administration/guide/ac03featu](http://www.cisco.com/en/US/docs/security/vpn_client/anyconnect/anyconnect25/administration/guide/ac03featu) Trusted Network Detection Trusted Network Detection (TND) gives you the ability to have AnyConnect automatically disconnect a VPN connection when the user is inside the corporate network (the trusted network) and start the VPN connection when the user is outside the corporate network (the untrusted network). This feature encourages greater security awareness by initiating a VPN connection when the user is outside the trusted network. If AnyConnect is also running Start Before Logon (SBL), and the user moves into the trusted network, the SBL window displayed on the computer automatically closes.

TND does not interfere with the ability of the user to manually establish a VPN connection. It does not disconnect a VPN connection that the user starts manually in the trusted network.

TND only disconnects the VPN session if the user first connects in an untrusted network and moves into a trusted network. For example, TND disconnects the VPN session if the user makes a VPN connection at home and then moves into the corporate office.

Because the TND feature controls the AnyConnect GUI and automatically initiates connections, the GUI should run at all times. If the user exits the GUI, TND does not automatically start the VPN connection.

You configure TND in the AnyConnect profile. No changes are required to the ASA configuration.

#### **NEW QUESTION: 4**

あなたはあなたの会社のデータベース管理者です。データベースエンジンとしてSQL Server 2016を使用する10の同一環境を作成することを計画しています。各環境には、次のカスタム要件があります。

\* 3つのユーザーデータベースをプレインストールする必要があります。

\* tempdbデータベースには、それぞれ1024 MBのデータファイルが8つ含まれている必要があります。

\* トレースフラグ2371はインスタンスレベルで有効にする必要があります。

ソリューションは以下の要件を満たす必要があります。

\* インスタンスは事前設定されている必要があります。

\* 将来、他のデータベース機能は必要ありません。

\* 解決策は最小限の管理努力を使わなければなりません。

あなたは環境を整える必要があります。あなたは何をすべきか？

**A.** SQL Server

2016をそれぞれ含む10個のAzure仮想マシンを、既定の設定を使用してインストールします。

**B.** SQL Server 2016の完全なインスタンスを使用して仮想マシンテンプレートを作成します。

**C.** SQL Server 2016の準備済みインスタンスを使用して仮想マシンテンプレートを作成します。

**D.** インストール構成ファイルを作成して、SQL Server 2016の無人インストールを実行します。

**Answer: B**

Explanation:

You should create a virtual machine template by using a complete instance of SQL Server 2016. You use the sysprep tool to prepare a complete instance of SQL Server 2016. By using a complete instance, SQL Server, the network, and the users are all created, and the system

cannot be reconfigured during the installation process.

Incorrect Answers:

A: You should not provision 10 Azure virtual machines that each contain SQL Server 2016, installed by using the default settings. A virtual machine created by using the Azure library provides you with a standard installation, and the requirements call for a custom installation. The instance will need some specific parameters for your custom installation. Therefore, you would have to customize each Azure virtual machine.

B: You should not create an installation configuration file and perform unattended installations of SQL Server 2016. This could be a valid option, but you would need to prepare 10 installations, and this would require a lot of effort. There are also some other administrative actions that must be performed that could also increase the amount of effort required, such as user database configuration.

C: You should not create a virtual machine template by using a prepared instance of SQL Server 2016. A virtual machine template that contains a prepared instance of SQL Server could be modified during the installation process. For example, some features could be added or removed during the installation process. The prepared instance contains a preconfigured version of SQL Server without network and user configurations.
