

Free PDF 2021 ACP-00701: Autodesk Certified Professional: Mechanical Engineer in Design and Manufacturing Accurate Free Test Questions - Errandsolutions

Get the most updated ACP-00701 Free Test Questions - Autodesk Certified Professional: Mechanical Engineer in Design and Manufacturing exam dumps, questions and answers and practice test from Errandsolutions ACP-00701 Free Test Questions, You can install our Autodesk ACP-00701 valid vce torrent on your computer or other device as you like without any doubts, Autodesk ACP-00701 Valid Test Tutorial.pdf These people are responsible for planning and executing strategies for infrastructure and application code that allows the different software engineering approaches such as continuous integration, continuous delivery, continuous monitoring, continuous testing and feedback, Autodesk ACP-00701 Valid Test Tutorial.pdf And if you got a bad result from the test, we promise to full refund you to reduce the loss of money.

These workers are trainers, project managers, and implementation **ACP-00701 Valid Test Tutorial.pdf** specialists, Prices are like the leveling system of the Han Dynasty and are a way to adjust prices.

They might find the task too daunting and simply leave everything [Exam SSP-C++ Objectives Pdf](#) alone, With a touch of sadness in his voice, he said that he originally wanted to be a musician but instead ended up a butcher.

Communism is ephemeral, Japan is ephemeral, [ACP-00701](#) but China is eternal, he said, Is the voice port enabled, Yet in the same timeperiod in many countries, politicians allocated **ACP-00701 Valid Test Tutorial.pdf** water to agricultural and other users as if it were an infinite resource.

Written and edited by Jon A, By Gregory Karp, Most returned customers said that our ACP-00701 dumps pdf covers the big part of main content of the certification exam.

ACP-00701 Valid Test Tutorial.pdf and Autodesk ACP-00701 Free Test Questions: Autodesk Certified Professional: Mechanical Engineer in Design and Manufacturing Finally Passed

Get the most updated Autodesk Certified Professional: Mechanical Engineer in Design and Manufacturing exam dumps, questions and answers and practice test from Errandsolutions, You can install our Autodesk ACP-00701 valid vce torrent on your computer or other device as you like without any doubts.

These people are responsible for planning and [Valid Test sce_ses5 Braindumps](#) executing strategies for infrastructure and application code that allows the different software engineering approaches such as continuous **ACP-00701 Valid Test Tutorial.pdf** integration, continuous delivery, continuous monitoring, continuous testing and feedback.

And if you got a bad result from the test, we promise to full refund you to reduce the loss of money, Using ACP-00701 quiz torrent, you can spend less time and effort [H13-723-ENU Free Test Questions](#) reviewing and preparing, which will help you save a lot of time and energy.

You can get a complete overview of all questions and PDF [Reliable PDP9 Test Guide](#) files that we have created for Autodesk Certified Professional: Mechanical Engineer in Design and Manufacturing exams, And instead of the backward information accumulation of learning together can make students feel great burden, our latest ACP-00701 exam guide can meet the needs of all kinds of students on validity or accuracy.

I believe that an efficiency and valid exam study guide can help you to pass the Autodesk

ACP-00701 exam successfully, Because ACP-00701 exam training vce is virus-free, you can rest assured to use.

100% Pass 2021 Autodesk ACP-00701 Useful Valid Test Tutorial.pdf

However, if you choose Errandsolutions, you will find gaining Autodesk certification ACP-00701 exam certificate is not so difficult, Most candidates can get a nice passing score.

But it can't be printed, Our experts expertise about ACP-00701 training materials is unquestionable considering their long-time research and compile, If you buy our ACP-00701 test prep you will pass the exam easily and successfully , and you will realize you dream to find an ideal job and earn a high income.

We will give you refund of the purchasing fee once you send your failed transcript to us, That is to say, most of questions in our ACP-00701 exam simulator are tightly linked with the tested points in the exam.

if you are pleased with it, we may have further cooperation, If you are not certain whether the ACP-00701 Exam Content prep guide from our company is suitable for you or not, so you are hesitate to buy and use our study materials.

The sales volume of the ACP-00701 test practice guide we sell has far exceeded the same industry and favorable rate about our products is approximate to 100%, Besides, we support online payment with credit card, and the payment **ACP-00701 Valid Test Tutorial.pdf** tools will change the currency of your country, and there is no necessary for you to exchange by yourself.

NEW QUESTION: 1

How can you prevent a MAC address from aging out of the MAC address table?

- A. Enable IGMP snooping.
- B. Disable the MAC address aging timer.
- C. Clear the MAC address table.
- D. Manually enter the MAC address into the MAC address table.

Answer: D

NEW QUESTION: 2

You are developing a new Microsoft Office Add-in to integrate a corporate invoicing system and Microsoft Excel.

You need to add a new button to the Office ribbon.

What should you add to the add-in?

- A. a custom function
- B. a command
- C. a task pane
- D. a dialog

Answer: B

Explanation:

Explanation

Add commands to a custom group

1. In the Customize the Ribbon window under the Customize the Ribbon list, click the custom group that you want to add a command to.
2. In the Choose commands from list, click the list you want to add commands from, for

example, Popular Commands or All Commands.

3. Click a command in the list that you choose.

4. Click Add.

5. To see and save your changes, click OK.

Reference:

NEW QUESTION: 3

ラボシミュレーション-STP Simを使用したLACP

SWITCH.comで働いています。トポロジ図に示されているように、既存のネットワークに新しいスイッチ (SwitchB) を追加しました。

現在、RouterAは正しく構成されており、SwitchAおよびSwitchB上のデバイスにルーティング機能を提供しています。

SwitchAは現在正しく構成されていますが、SwitchBの追加をサポートするために変更する必要があります。SwitchBには最小限の構成があります。

SwitchAとSwitchBの必要な構成の競合を担当しています。

SwitchAおよびSwitchBは、Ciscoをイネーブルパスワードとして使用します。

SwitchAの構成要件

SwitchAのVTPおよびSTPコンフィギュレーションモードは変更しないでください。

-SwitchAはVLAN 11、12、13、21、22、およびVLANのルートスイッチである必要があります

23.他のすべてのVLANはデフォルト値のままにしておく必要があります。

SwitchBの構成要件

-VLAN 21

名前：マーケティング

fa0 / 9およびfa0 / 10に接続された2台のサーバーをサポートします

-VLAN 22

名前：販売

fa0 / 13およびfa0 / 14に接続された2つのサーバーをサポートします

-VLAN 23

名前：エンジニアリング

fa0 / 15およびfa0 / 16に接続された2つのサーバーをサポートします

-サーバーに接続するアクセスポートはすぐに移行する必要があります

デバイスの接続を検出すると、転送状態。

-SwitchB VTPモードはSwitchAと同じである必要があります。

-SwitchBは、SwitchAと同じスパニングツリーモードで動作する必要があります。

-SwitchBでルーティングを構成しない

-SVI vlan 1のみが構成され、アドレスを使用する

192.168.1.11/24

スイッチ間接続の構成要件

-運用上およびセキュリティ上の理由から、トランキングは無条件である必要があります、トランクリンクを通過するときにVLAN 1、21、22、および23にタグを付ける必要があります。

-SwitchAとSwitchB間の2つのトランクは、すべてのVLANの帯域幅を最大限に使用できるモードで構成する必要があります。

このモードは、SwitchAを使用して、独自仕様ではないプロトコルで実行する必要があります。

アクティベーションの制御。

-不要なブロードキャストの伝播は、マニュアルを使用して制限する必要があります

このトランクリンクのプルーニング。

Answer:

Explanation:

SW-A (close to router)

SW-A#configure terminal

SW-A(config)#spanning-tree vlan 11-13,21-23 root primary

SW-A(config)#vlan 21

SW-A(config-vlan)#name Marketing

SW-A(config-vlan)#exit

SW-A(config)#vlan 22

SW-A(config-vlan)#name Sales

SW-A(config-vlan)#exit

SW-A(config)#vlan 23

SW-A(config-vlan)#name Engineering

SW-A(config-vlan)#exit

SW-A(config)#interface range Fa0/3 - 4

SW-A(config-if-range)#no switchport mode access

SW-A(config-if-range)#no switchport access vlan 98 (These two commands must be deleted to form a trunking link) SW-A(config-if-range)#switchport trunk encapsulation dot1q (cannot issued this command on this switch, but don't worry coz I still got 100%)

SW-A(config-if-range)#switchport mode trunk SW-A(config-if-range)#switchport trunk native vlan 99 SW-A(config-if-range)#switchport trunk allowed vlan 1,21-23

SW-A(config-if-range)#channel-group 1 mode active SW-A(config-if-range)#channel-protocol lacp SW-A(config-if-range)#no shutdown SW-A(config-if-range)#end SW-B (far from router)

SW-B#configure terminal SW-B(config)#vlan 21 SW-B(config-vlan)#name Marketing

SW-B(config-vlan)#exit SW-B(config)#vlan 22 SW-B(config-vlan)#name Sales

SW-B(config-vlan)#exit SW-B(config)#vlan 23 SW-B(config-vlan)#name Engineering

SW-B(config-vlan)#exit SW-B(config)#vlan 99 SW-B(config-vlan)#name TrunkNative // not necessary to name it but just name it same as SwitchA SW-B(config-vlan)#exit

SW-B(config)#interface range Fa0/9 - 10 SW-B(config-if-range)#switchport mode access

SW-B(config-if-range)#switchport access vlan 21 SW-B(config-if-range)#spanning-tree portfast

SW-B(config-if-range)#no shutdown SW-B(config-if-range)#exit SW-B(config)#interface range

Fa0/13 - 14 SW-B(config-if-range)#switchport mode access SW-B(config-if-range)#switchport

access vlan 22 SW-B(config-if-range)#spanning-tree portfast SW-B(config-if-range)#no

shutdown SW-B(config-if-range)#exit SW-B(config)#interface range Fa0/15 - 16

SW-B(config-if-range)#switchport mode access SW-B(config-if-range)#switchport access vlan

23 SW-B(config-if-range)#spanning-tree portfast SW-B(config-if-range)#no shutdown

SW-B(config-if-range)#exit SW-B(config)#vtp mode transparent SW-B(config)#spanning-tree

mode rapid-pvst SW-B(config)#ip default-gateway 192.168.1.1 (you can get this IP from SW-A with command show cdp neighbour detail) // not sure about this command because the

question says

"No routing is to be configured on SwitchB".

SW-B(config)#interface vlan 1

SW-B(config-if)#ip address 192.168.1.11 255.255.255.0

SW-B(config-if)#no shutdown

SW-B(config-if)#exit

SW-B(config)#interface range Fa0/3 - 4

SW-B(config-if-range)#switchport trunk encapsulation dot1q (yes I can issued this command on this switch) SW-B(config-if-range)#switchport mode trunk SW-B(config-if-range)#switchport

trunk native vlan 99 SW-B(config-if-range)#switchport trunk allowed vlan 1,21-23

SW-B(config-if-range)#channel-group 1 mode passive //mode passive because

"SwitchA controlling activation"

SW-B(config-if-range)#channel-protocol lacp

SW-B(config-if-range)#no shutdown

SW-B(config-if-range)#end

Some guidelines for configuring SwitchA & SwitchB:

Configuration Requirements for SwitchA

- The VTP and STP configuration modes on SwitchA SW-A(config)#spanning-tree vlan should not be modified. 11-13,21-23 root primary
- SwitchA needs to be the root switch for vlans 11, 12, 13, 21, 22 and 23. All other vlans should be left are their default values

Configuration Requirements for SwitchB

- Vlan 21, Name: Marketing, will support two servers vlan ... attached to fa0/9 and fa0/10 name ...
- Vlan 22, Name: Sales, will support two servers attached (VLANs must be created on to fa0/13 and fa0/14 both switches if not exist)
- Vlan 23, Name: Engineering, will support two servers interface range Fa0/x - x attached to fa0/15 and fa0/16 switchport mode access
- Access ports that connect to server should transition switchport access vlan immediately to forwarding state upon detecting the spanning-tree portfast connection of a device.
- SwitchB VTP mode needs to be the same as SwitchA. vtp mode transparent
- SwitchB must operate in the same spanning tree mode spanning-tree mode rapid- as SwitchA. pvst
- No routing is to be configured on SwitchB. interface vlan 1
- Only the SVI vlan 1 is to be configured and it is to use ip address 192.168.1.11 address 192.168.1.11/24. 255.255.255.0 Inter-switch Connectivity Configuration Requirements:
- For operational and security reasons SW-A(config)#interface range Fa0/3 - 4 trunking should be unconditional and Vlans SW-A(config-if)#no switchport mode access 1, 21, 22 and 23 should tagged when SW-A(config-if)#no switchport access vlan traversing the trunk link. 98 //These two commands must be deleted to form a trunking link.

```
SW-A(config-if)#switchport mode trunk
SW-A(config-if)#switchport trunk native
vlan 99
```

```
-----
SW-B(config)#interface range Fa0/3 - 4
SW-B(config-if)#switchport trunk
encapsulation dot1q (yes I can issued this
command on this switch)
SW-B(config-if)#switchport mode trunk
SW-B(config-if)#switchport trunk native
vlan 99
```

- The two trunks between SwitchA and SW-A(config)#interface range Fa0/3 - 4 SwitchB need to be configured in a mode SW-A(config-if)#channel-group 1 mode that allows for the maximum use of their active bandwidth for all vlans. This mode should SW-A(config-if)#channel-protocol lacp be done with a non-proprietary protocol, SW-A(config-if)#no shutdown with SwitchA controlling activation. ----- SW-B(config)#interface range Fa0/3 - 4 SW-B(config-if)#channel-group 1 mode passive SW-B(config-if)#channel-protocol lacp SW-B(config-if)#no shutdown

```
-----
Maybe the interface Port-channel 1 was
configured on both switches so we don't
configure it here. If not we have to
configure them with "interface port-channel
1" command. Also you have to turn them
up.
```

- Propagation of unnecessary broadcasts SW-A(config)#interface range Fa0/3 - 4 should be limited using manual pruning on SW-A(config-if)#switchport trunk allowed this trunk link. vlan

1,21-23

```
SW-B(config)#interface range Fa0/3 - 4
SW-B(config-if)#switchport trunk allowed
vlan 1,21-23
```

You may have to configure Interface Port-Channel on both switches. Check the configuration first, if it does not exist, use these commands:

```
interface port-channel1
switchport mode trunk
```

```
switchport trunk native vlan 99 //this command will prevent the "Native VLAN mismatched"
error on both switches switchport trunk allowed vlan 1,21-23,99
```

Some notes for this sim:
+ You should check the initial status of both switches with these commands: show vtp status (transparent mode on switchA and we have to set the same mode on switchB), show spanning-tree [summary] (rapid-pvst mode on switchA and we have to set the same mode on switchB), show vlan (check the native vlan and the existence of vlan99), show etherchannel 1 port-channel and show ip int brief (check if Port-channel 1 has been created and make sure it is up), show run (to check everything again).

+ When using "int range f0/x - y" command hit space bar before and after "-" otherwise the simulator does not accept it.

+ You must create vlan 99 for the switchB. SwitchA already have vlan 99 configured.

+ At the end, you can try to ping from SwitchB to RouterA (you can get the IP on RouterA via the show cdp neighbors detail on SwitchA), not sure if it can ping or not. If not, you can use the "ip default-gateway 192.168.1.1" on SwitchB.

+ The name of SwitchA and SwitchB can be swapped or changed so be careful to put your configuration into appropriate switch.
