Or you can request to free change other ACP-DevOps sure-pass learning materials: ACP DevOps Engineer Certification, Also we won't send advertisement emails to you too.

#### **NEW QUESTION: 1**

A technician is about to put a computer back into service that has not been turned on for many months. It was healthy when taken out of service and boots quickly without any problems. Which of the following actions would be a best practice to begin computer maintenance? (Select TWO).

- A. Run Windows updates.
- B. Run antivirus updates.
- C. Defragment the hard disk.
- D. Run a full antivirus scan.
- E. Configure the firewall to access the Internet.

**Answer: A,B**

#### **NEW QUESTION: 2**

When library services are assigned for a document management system, what elements should be discussed with the customer?

- A. Versioning, document life cycle, attributes
- B. View and edit applications, on-line content conversion
- C. Integration aspects, user interface
- D. Scanning, image enhancement, display of image

**Answer: A**

#### **NEW QUESTION: 3**

Your network contains two Active Directory domains named contoso.com and adatum.com. The contoso.com domain contains a server named Server1.contoso.com. The adatum.com domain contains a server named server2.adatum.com.

Server1 and Server2 run Windows Server 2012 and have the DirectAccess and VPN (RRAS) role service installed.

Server1 has the default network policies and the default connection request policies. You need to configure Server1 to perform authentication and authorization of VPN connection requests to Server2. Only users who are members of AdatumGroup1 must be allowed to connect.

Which two actions should you perform on Server1? (Each correct answer presents part of the solution. Choose two.)

- A. Connection request policies
- B. Create a connection request policy.
- C. Create a network policy.
- D. Network policies

**Answer: B,D**

Explanation:

\* Connection request policies are sets of conditions and settings that allow network administrators to designate which Remote Authentication Dial-In User Service (RADIUS) servers perform the authentication and authorization of connection requests that the server running Network Policy Server (NPS) receives from RADIUS clients. Connection request policies can be configured to designate which RADIUS servers are used for RADIUS accounting.

\* With connection request policies, you can use NPS as a RADIUS server or as a RADIUS proxy, based on factors such as the following: The time of day and day of the week

The realm name in the connection request

The type of connection being requested The IP address of the RADIUS client
