NEW QUESTION: 3

Ivan Johnson is reviewing the investment merits of BioT Lab, a fast-growing biotechnology company.

BioT Lab has developed several drugs, which are being licensed to major drug companies. BioT Lab also has several drugs in phase III trials (phase III trials are the last testing stage before FDA approval).

Johnson notes that two drugs recently received approval which should provide BioT Lab solid revenue growth and generate predictable cash flow well into the future. Based on the potential for the two drugs, BioT Lab's estimated annual cash flow growth rate for the next two years is 25%, and long-term growth is expected to be 12%. Because of BioT Lab's attractive investment opportunities, the company does not pay a dividend. BioT Lab's current weighted average cost of capital is 15% and its stock is currently trading at \$50 per share. Financial information for BioT Lab for the most recent 12 months is provided below:

- * Net working capital excluding cash increased from \$7,460,000 to \$9,985,000;
- * Book value increased from \$81,250,000 to \$101,250,000.
- * BioT Lab currently has no debt.
- * Research facilities and production equipment were purchased for \$8,450,000.
- * BioT Lab held non-operating assets in the amount of \$875,000.
- * Net income for the 12 months was \$20,000,000.
- * BioT Lab has a marginal tax rate of 40%.
- * Noncash charges for depreciation and restructuring for the 12 months were \$1,250,000.

BioT Lab's management has indicated an interest in establishing a dividend and will fund new drug research by issuing additional debt.

Johnson also reviews a competitor to BioT Lab, Groh Group, which has a larger segment operating in a highly cyclical business. The Groh Group has a debt to equity ratio of 1.0 and pays no dividends. In addition, Groh Group plans to issue bonds in the coming year.

Johnson prefers to use free cash flow analysis to value investments. Which of the statements below is least accurate in describing the advantages of free cash flow valuation models?

- A.** Determining free cash flow is easier than dividends.
- B.** Accounting issues limit the usefulness of reported earnings, while free cash flow is adjusted for these issues.
- C.** A company must generate free cash flow to grow in the long run.

Answer: A

Explanation:

An analyst must review the cash flows from a company's operating, investing and financing activities to generate a useful free cash flow, while dividends are simply set by the Board of Directors. Analysts use free cash flow whenever an investor takes a control perspective, such as in the event of an acquisition.

The P/E model is considered weak because accounting issues can impact earnings. Companies that do not generate free cash flow in the long run are in financial trouble. (Study Session 12, LOS41.b,n)
