Step 1: Deploy the Azure Databricks service
Create an Azure Databricks workspace by setting up an Azure Databricks Service.
Step 2: Deploy a Spark cluster and then attach the required libraries to the cluster.
To create a Spark cluster in Databricks, in the Azure portal, go to the Databricks workspace that
you created, and then select Launch Workspace.
Attach libraries to Spark cluster: you use the Twitter APIs to send tweets to Event Hubs. You
also use the Apache Spark Event Hubs connector to read and write data into Azure Event Hubs.
To use these APIs as part of your cluster, add them as libraries to Azure Databricks and
associate them with your Spark cluster.
Step 3: Create and configure a Notebook that consumes the streaming data.
