#### **NEW QUESTION: 1**

- A. Option A
- B. Option D
- C. Option B
- D. Option C
- E. Option E

**Answer: C**

Explanation:

VTP version 3 supports these features that are not supported in version 1 or version 2:

Enhanced authentication-You can configure the authentication as hidden or secret. When hidden, the secret key from the password string is saved in the VLAN database file, but it does not appear in plain text in the configuration. Instead, the key associated with the password is saved in hexadecimal format in the running configuration. You must reenter the password if you enter a takeover command in the domain. When you enter the secret keyword, you can directly configure the password secret key.

Support for extended range VLAN (VLANs 1006 to 4094) database propagation. VTP versions 1 and 2 propagate only VLANs 1 to 1005. If extended VLANs are configured, you cannot convert from VTP version 3 to version 1 or 2.
