NEW QUESTION: 1

You must apply patches and patch bundles in a rolling fashion, if possible, on the components of your Database Machine.

You use RAC for your database and also use Data Guard, having standby database on another Database Machine.

You wish to have scripts that contain the appropriate command to patch your environment.

Your patch bundle is on the first database server and is located at /u01/stage.

You have downloaded the oplan utility to the first database server and run the following:

```
$ORACLE_HOME/oplan/oplangenerateApplySteps /u01/stage
```

Which two are true concerning oplan?

- A.** It will generate instructions for patching all the components on the Database Machine.
- B.** It will generate instructions for patching the Data Guard environment on the standby location.
- C.** It will generate instructions for patching only storage servers.
- D.** It will generate instructions for patching the RAC Oracle Home on the primary location.
- E.** It will generate instructions for patching the Grid Infrastructure home on the primary location.

Answer: D,E

Explanation:

Oplan generates instructions for all of the nodes in the cluster.

Note:

*Oplan is a utility that facilitates you with the application of bundle patches on Exadata compute

nodes via Opatch. This new utility helps you with the patch process by generating step-by-step instructions telling you how to apply a bundle patch in your environment.

*Exadata is much more than a "database-in-a-box." It is a set of compute nodes (think RAC node

servers) combined with ultra-fast infiniband (...and 10GB ethernet, and multiple 1GB ethernet) and

storage nodes.

Incorrect:

Not D: There is no support for Oracle DataGuard

選んでください：

- A. Cloudwatchメトリックを使用する
- B. Cloudtrailで証跡を有効にする
- C. KMSサービスのログを有効にします
- D. Cloudwatchログを有効にする

Answer: B

AWS KMS is integrated with CloudTrail, a service that captures API calls made by or on behalf of AWS KMS in your AWS account and delivers the log files to an Amazon S3 bucket that you specify. CloudTrail captures API calls from the AWS KMS console or from the AWS KMS API.

Using the information collected by CloudTrail, you can determine what request was made, the source IP address from which the request was made, who made the request when it was made, and so on.

Option A is invalid because logging is not possible in the KMS service

Option C and D are invalid because Cloudwatch cannot be used to monitor API calls For more information on logging using Cloudtrail please visit the below URL
