All the payments and products are secured, Just look at the warm feedbacks from our loyal customers, they all have become more successful in their career with the help of our C-C4HCX-04 practice engine.

After you use C-C4HCX-04 real exam, you will not encounter any problems with system, You may double the salary after you pass the C-C4HCX-04 exam, All our products come with a 30-day Money Back Guarantee.

So high-quality contents and flexible choices of C-C4HCX-04 learning mode will bring about the excellent learning experience for you, We provide real SAP C-C4HCX-04 exam questions with exact answers.

As for how to get the best valid C-C4HCX-04 exam study guides, we can provide you with the useful C-C4HCX-04 practice study material.

NEW QUESTION: 1

DRAG DROP

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2008 R2. Server1 is a file server.

You deploy a new member server named Server2 that runs Windows Server 2012.

You plan to migrate file shares from Server1 to Server2. File share and NTFS permissions are assigned only to domain local groups.

You need to identify which actions are required to perform the migration.

Which five actions should you identify?

To answer, move the five appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Box 1: On Server2, install the Windows Server Migration Tools.

Box 2: On Server2, create a deployment folder.

Box 3: On Server1, register the Windows Server Migration Tools.

Box 4: On Server2, run the Receive-SmigServerData cmdlet.

Box 5: On Server1, run the Send-SmigServerData cmdlet.

Note:

* Windows Server Migration Tools installation and preparation can be divided into the following stages.

1. (box 1) Installing Windows Server Migration Tools on destination servers that run Windows Server 2012.

2. (Box 2) Creating deployment folders on destination servers that run Windows Server 2012, for copying to source servers.

3. Copying deployment folders from destination servers to source servers.

4. (Box 3) Registering Windows Server Migration Tools on source servers.

* Registering Windows Server Migration Tools on source computers

Before you can use a technology's Windows PowerShell snap-in for the first time, it must be registered with Windows PowerShell. You can use SmigDeploy.exe to register the Windows Server Migration Tools snap-in on a migration source computer

* (box 5) Receive-SmigServerData (Receive must be send)

This cmdlet allows a target server to receive shares, folders, files, and associated permissions and share properties that are migrated from a source server. Receive-SmigServerData must be running on the destination server at the same time that the Send-SmigServerData cmdlet is running on the source server.

* (box 5) Send-SmigServerData (Send must be after receive)

This cmdlet migrates folders, files, and associated permissions and share properties from the local server to a target server. Send-SmigServerData must be run on the source server at the same time that the Receive-SmigServerData cmdlet is running on the destination server.

NEW QUESTION: 2

The implementation group has been using the test bed to do an IPv6 'proof-of-concept'. After several changes to the network addressing and routing schemes, a trouble ticket has been opened indicating that the loopback address on R1 (2026::111:1) is not able to ping the loopback address on DSW2 (2026::102:1).

Use the supported commands to isolate the cause of this fault and answer the following question.

What is the solution to the fault condition?

A. Under the interface Tunnel34 configuration delete the tunnel mode ipv6 command.

B. Under the interface Tunnel34 configuration enter the ip address unnumbered Serial0/0/0.34 command.

C. Under the interface Serial0/0/0.34 configuration enter the ipv6 address 2026::34:1/122 command.

D. Under the interface Tunnel34 configuration delete the tunnel source Serial0/0/0.34 command and enter the tunnel source 2026::34:1/122 command.

Answer: A

Explanation:

As explained earlier, the problem is with route misconfigured tunnel modes on R3. R3 is using tunnel mode ipv6, while R4 is using the default of GRE. We need to remove the "tunnel mode ipv6" command under interface Tunnel34

NEW QUESTION: 3

Scenario

Please read this scenario prior to answering the Question

You are serving as the Lead Architect for an insurance company, which has been formed through the

merger of three previously independent companies. The company now consists of three divisions with the

same names and division headquarters as their predecessors.

The lack of integration between the three divisions has increasingly caused problems in the handling of

customer and financial information. The inability to share information has resulted in lost opportunities to

leverage the synergies that should have been possible as a result of the merger. At present,

each division maintains its own applications. Despite an earlier initiative to install a common application to manage customer, products, and claims information, each division has different ways of defining these core elements and has customized the common application to the point where the ability to exchange information is difficult, costly, and error-prone. As a result, the company has made the decision to introduce a common web portal, contact center software suite, and document management system. Also the company has selected a single enterprise-wide customer relationship management (CRM) application to consolidate information from several applications that exist across the divisions. The application will be used by each of the divisions and accessed by third party partners through well defined interfaces. The Corporate Board is concerned that the new application must be able to manage and safeguard confidential customer information in a secure manner that meets or exceeds the legal requirements of the countries in which the company operates. This will be an increasingly important capability as the company expands its online services in cooperation with its partners. The CIO has formed an Enterprise Architecture department, and one of the primary goals in its charter is to coordinate efforts between the implementation team and the migration teams in each division. The CIO has also formed a cross-functional Architecture Board to oversee and govern the architecture. The company has an existing team of security architects. TOGAF 9 has been selected as the core framework for use for the Enterprise Architecture program. The CIO has endorsed this choice with the full support of top management.

Refer to the Scenario

As part of the process for establishing the Enterprise Architecture department, you are developing a set of architecture principles to guide the activities. You need to recommend the best approach for this work. Based on TOGAF, which of the following is the best answer?

A. You would review the mission statements for the company and its divisions, together with the corporate business goals and business drivers. Based on that review, you would work closely with the key stakeholders and the Architecture Board to define the architecture principles. You would ensure that they actively promote the alignment of IT with the corporate business strategies. You would then hold review meetings with the relevant stakeholders, including senior management, ensuring their support.

B. You would define a set of principles that support the preferred best practices embodied in the Enterprise Architecture department charter. You would publish the principles on the corporate intranet

to ensure widespread acceptance and compliance. You would then schedule regular periodic Compliance Assessments with each of the divisions to check that they have made satisfactory progress toward meeting the objectives and conditions embodied in the principles.

C. You would analyze the mission statements for the company and each of its divisions, together with the corporate business goals. Based on that analysis, you would define a set of architecture principles and review them with the CIO. When developing the principles, you would ensure that they actively promote the alignment of IT with the business strategies and initiatives of the company. You would then seek the endorsement of the CIO and senior management.

D. You would gather information from credible industry sources in the insurance business. Based on that information, you would assess current trends and apply them to defining a set of principles that embody best practices. You would select architecture principles that do not conflict with each other and that should be stable. You would ensure that all the principles are realistic and avoid including principles that are too obvious.

Answer: A
