As a leading braindumps provider, our website offers the most reliable C-S4CFI-2105 test briandumps and the most comprehensive service to our candidates, First of all, our training material is compiled and checked by our professional experts.

NEW QUESTION: 1

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1.

On Server1, administrators plan to use several scripts that have the .ps1 extension.

You need to ensure that when code is generated from the scripts, an event containing the details of the code is logged in the Operational log.

Which Group Policy setting or settings should you configure?

- A. Turn on PowerShell Transcription
- B. Enable Protected Event Logging
- C. Audit Process Creation and Audit Process Termination
- D. Turn on PovverShell Script Block Logging

Answer: D

Explanation:

Explanation: https://docs.microsoft.com/en-us/powershell/wmf/5.0/audit_scriptThe new Detailed Script Tracing feature lets you enable detailed tracking and analysis of Windows PowerShell scripting use on a system.After you enable detailed script tracing, Windows PowerShell logs all script blocks to the ETW event log,Microsoft-Windows-PowerShell/Operational.If a script block creates another script block (for example, a script that calls the Invoke-Expression cmdlet on astring), that resulting script block is logged as well.Logging of these events can be enabled through the Turn on PowerShell Script Block Logging GroupPolicy setting(in GPO Administrative Templates -> Windows Components -> Windows PowerShell).Answer D is incorrect, since Transcription (Start-Transcript -path <FilePath>) uses a custom output locationinstead of Event Viewer \ Operational Log

NEW QUESTION: 2

- A. Option A
- B. Option C
- C. Option D
- D. Option B

Answer: D

NEW QUESTION: 3

Your network contains two Hyper-V hosts that run Windows Server 2012 R2. The Hyper-V hosts contains several virtual machines that run Windows Server 2012 R2.

You install the Network Load Balancing feature on the virtual machines.

You need to configure the virtual machines to support Network Load Balancing (NLB).

Which virtual machine settings should you configure?

- A. DHCP guard
- B. MAC address
- C. Port mirroring
- D. Router guard

Answer: B

Explanation:

When MAC addresses are not assigned to virtual machines, it could cause network problems.
