Free download before you buy our product, Therefore, for [C-S4CPS-2108](#) your convenience and your future using experience, we sincerely suggest you to have a download to before payment.

They are thirstier to success.

### **NEW QUESTION: 1**

ファイル転送プロトコルの説明を左側から右側の正しいプロトコルにドラッグアンドドロップします。

### **Answer:**

Explanation:

### **NEW QUESTION: 2**

Note: This question is part of a series of questions that use the same scenario.

For your convenience, the scenario is repeated in each question.

Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

You have an initial dataset that contains the crime data from major cities.

You plan to build training models from the training data. You plan to automate the process of adding more data to the training models and to constantly tune the models by using the additional data, including data that is collected in near real-time. The system will be used to analyze event data gathered from many different sources, such as Internet of Things (IoT) devices, live video surveillance, and traffic activities, and to generate predictions of an increased crime risk at a particular time and place.

You have an incoming data stream from Twitter and an incoming data stream from Facebook, which are event-based only, rather than time-based. You also have a time interval stream every 10 seconds.

The data is in a key/value pair format. The value field represents a number that defines how many times a hashtag occurs within a Facebook post, or how many times a Tweet that contains a specific hashtag is retweeted.

You must use the appropriate data storage, stream analytics techniques, and Azure HDInsight cluster types for the various tasks associated to the processing pipeline.

You plan to consolidate all of the streams into a single timeline, even though none of the streams report events at the same interval.

You need to aggregate the data from the feeds to align with the time interval stream. The result must be the sum of all the values for each key within a 10 second interval, with the keys being the hashtags.

Which function should you use?

- A. countByValueAndWindow
- B. reduceByKeyAndWindow
- C. reduceByWindow
- D. countByWindow
- E. updateStateByKey

**Answer: E**

### **NEW QUESTION: 3**

A company wants to deploy new compute resources efficiently through automation. Which of the following is a key success factor to achieve automation?

- A. Ensure surplus compute resources are available.
- B. Move security testing to the end of the process.
- C. Deploy virtualized resources to the cloud.
- D. Establish and document standard changes.

**Answer: D**
