NEW QUESTION: 1

Which types of data can be combined together for HPE Converged Storage. (Select three.)

- A.** metadata
- B.** object
- C.** unstructured
- D.** file
- E.** block
- F.** structured

Answer: B,D,E

Explanation:

Explanation/Reference:

With the HPE 3PAR File Persona Software Suite, you can unlock the native file and object access capabilities within your HPE 3PAR StoreServ Storage array, made possible by the HPE 3PAR Operating System and your array's converged controllers.

You will have true convergence of block, file, and object access with the HPE 3PAR File Persona Software Suite.

NEW QUESTION: 2

You are writing an EE component that functions as a message producer. The message producer

sends message to a JMS queue. The component environment defines a resource-ref of type `javax.jms.ConnectionFactory` with the same `jms/ConnectionFactory`.

Which will correctly obtain a connection factory for a queue?

A. `@Resource ("ConnectionFactory")`

```
private static QueueConnectionFactory confac;
```

B. `InitialContext Context = new Context ();`

```
QueueConnectionFactory confac = (QueueConnectionFactory) context.lookup
```

```
("java: comp/env/jms/Myfactory");
```

C. `Context context = new initialContext();`

```
ConnectionFactory confac = (ConnectionFactory) Context.lookup
```

```
("java: comp/env/jms/ConnectionFactory");
```

D. `@Resource (lookup = "jms/QueueConnectionFactory")`

```
private static ConnectionFactory confac;
```

Answer: D

Explanation:

A connection factory is the object a client uses to create a connection to a provider. A connection factory encapsulates a set of connection configuration parameters that has been defined by an administrator. Each connection factory is an instance of the `ConnectionFactory`, `QueueConnectionFactory`, or `TopicConnectionFactory` interface

At the beginning of a JMS client program, you usually inject a connection factory resource into a `ConnectionFactory` object. For example, the following code fragment specifies a resource whose JNDI name is `jms/ConnectionFactory` and assigns it to a `ConnectionFactory` object:

```
@Resource(lookup = "jms/ConnectionFactory") private static ConnectionFactory  
connectionFactory;
```

NEW QUESTION: 3

企業がデータストレージソリューションを評価しています。

次の要件を満たすデータストレージソリューションを推奨する必要があります。

BLOBオブジェクトを保存するコストを最小限に抑えます。

アクセス頻度が低いデータのアクセスを最適化します。

データは少なくとも30日間保存する必要があります。

データの可用性は少なくとも99%でなければなりません。

何をお勧めしますか？

A. Archive

B. Cold

C. Hot

D. Premium

Answer: B

Explanation:

Azure's cool storage tier, also known as Azure cool Blob storage, is for infrequently-accessed data that needs to be stored for a minimum of 30 days. Typical use cases include backing up data before tiering to archival systems, legal data, media files, system audit information, datasets used for big data analysis and more.

The storage cost for this Azure cold storage tier is lower than that of hot storage tier. Since it is expected that the data stored in this tier will be accessed less frequently, the data access charges are high when compared to hot tier. There are no additional changes required in your applications as these tiers can be accessed using APIs in the same manner that you access Azure storage.
