Windows Server Migration Tools installation and preparation can be divided into the following stages.

Installing Windows Server Migration Tools on destination servers that run Windows Server 2012.

Creating deployment folders on destination servers that run Windows Server 2012, for copying to source servers.

Copying deployment folders from destination servers to source servers.

Registering Windows Server Migration Tools on source servers.

Registering Windows Server Migration Tools on source computers

Before you can use a technology's Windows PowerShell snap-in for the first time, it must be registered with Windows PowerShell. You can use SmigDeploy.exe to register the Windows Server Migration Tools snap-in on a migration source computer

Send-SmigServerData This cmdlet migrates folders, files, and associated permissions and share properties from the local server to a target server. Send-SmigServerData must be run on the source server at the same time that the Receive-SmigServerData cmdlet is running on the destination server.

Receive-SmigServerData

This cmdlet allows a target server to receive shares, folders, files, and associated permissions and share properties that are migrated from a source server. Receive-SmigServerData must be running on the destination server at the same time that the Send-SmigServerData cmdlet is running on the source server.

File server or data migration can be achieved by migrating the data from the existing server using tools such as Microsoft Robocopy and Microsoft File Server Migration Tool (FSMT), or directly presenting the storage Logical Unit Number (LUNs) onto a new server.

Windows Server Migration Tools is a feature that is available for installation on computers that are running Windows Server 2008 R2 by using the Add Features Wizard in Server Manager.

Windows Server Migration Tools can be removed from Windows Server 2008 R2 by using the Remove Features Wizard.

To migrate roles, features, and other data by using Windows Server Migration Tools, you must also deploy Windows Server Migration Tools on source servers from which you want to migrate data. Windows Server Migration Tools is deployed on source servers by creating a deployment folder on a computer that is running Windows Server 2008 R2, and then copying it to the pre-Windows Server 2008 R2 source computer operating systems shown in the table in this topic.
