NEW QUESTION: 1
After recovering from a data breach in which customer data was lost, the legal team meets with the Chief Security
Officer (CSO) to discuss ways to better protect the privacy of customer data.
Which of the following controls support this goal?
A. Redundancy and fault tolerance
B. Contingency planning
C. Encryption and stronger access control
D. Hashing and non-repudiation
Answer: C
Explanation:
Encryption is used to protect data/contents/documents. Access control refers to controlling who accesses any data/contents/documents and to exercise authorized control to the accessing of that data.
Incorrect Answers:
A. Contingency planning is part of a disaster-recovery plan.
C. Hashing refers to the hash algorithms used in cryptography. Nonrepudiation prevents one party from denying actions they carried out.
D. Redundancy and fault tolerance refers to the ability to sustain operation in the event of system and component failure.

NEW QUESTION: 3
A large company is designing a Benefts application with PRPC. The company is broken into five
regions, and each has different processes and business rules that affect the application. As a
pilot, you are implementing the application for a single region. How do you determine which
rules belong in the framework layer versus the implementation layer? (Choose One)
A. Treat the pilot region functionality as the implementation layer
B. You must gain consensus across all divisions in order to determine which rules are common
across all regions
C. Treat the pilot region functionality as the framework unless the region-specific functionality
has already been defined
D. Only place rules in the framework layer and don't build an implementation layer until more
regions are required
Answer: C

NEW QUESTION: 4

A. Option D
B. Option A
C. Option B
D. Option C
Answer: C
