### NEW QUESTION: 3

You network contains a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) environment.

You have an application named App1.

You need to ensure that users in the finance department can install App1 by using the Application Catalog.

What should you do?

- A. Create a required user deployment and target the deployment to all of the finance department users.
- B. Create an available user deployment and target the deployment to all of the finance department users.
- C. Create an available user deployment and target the deployment to all of the client computers in the finance department.
- D. Create a required user deployment and target the deployment to all of the client computers in the finance department.

#### Answer: B

Explanation:

By selecting "Available" it will be selectable for the users in the Application Catalog. The "Required" option would force the installation to all users in the finance department.

Note: To deploy an application

...

8. On the Deployment Settings page of the Deploy Software Wizard, specify the following information:

\*Action - From the drop-down list, choose whether this deployment is intended to Install or Uninstall the application.

\*Purpose - From the drop-down list, choose one of the following options:

\*Available - If the application is deployed to a user, the user sees the published application in the Application Catalog and can request it on demand. If the application is deployed to a device, the user will see it in the Software Center and can install it on demand.

\*Required - The application is deployed automatically according to the configured schedule. However, a user can track the application deployment status if it is not hidden, and can install the application before the deadline by using the Software Center.
