We can't forget the advantages and the conveniences that reliable C-THR97-2105 study materials complied by our companies bring to us, (PDF, APP, software), If you have any question about our products and services, you can contact [C-HANATEC-17 Latest Test Fee](#) our online support in our Errandsolutions website, and you can also contact us by email after your purchase.

NEW QUESTION: 1

You are implementing conditional access policies.

You must evaluate the existing Azure Active Directory (Azure AD) risk events and risk levels to configure and implement the policies.

You need to identify the risk level of the following risk events:

- * Users with leaked credentials
- * Impossible travel to atypical locations
- * Sign ins from IP addresses with suspicious activity

Which level should you identify for each risk event? To answer, drag the appropriate levels to the correct risk events. Each level may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Azure AD Identity protection can detect six types of suspicious sign-in activities:

- * Users with leaked credentials
- * Sign-ins from anonymous IP addresses
- * Impossible travel to atypical locations
- * Sign-ins from infected devices
- * Sign-ins from IP addresses with suspicious activity
- * Sign-ins from unfamiliar locations

These six types of events are categorized in to 3 levels of risks - High, Medium & Low:

NEW QUESTION: 2

Welches der folgenden Risiken ist bei der Implementierung eines Data Warehouse am GRÖSSTEN?

- A. Daten, die nicht aktualisiert wurden oder aktuell sind
- B. Datenvervielfältigung
- C. längere Reaktionszeit auf den Produktionssystemen
- D. Zugriffskontrollen, die nicht ausreichen, um Datenänderungen zu verhindern

Answer: D

Explanation:

Erläuterung:

Sobald sich die Daten in einem Warehouse befinden, sollten keine Änderungen daran vorgenommen und Zugriffssteuerungen eingerichtet werden, um Datenänderungen zu verhindern. Eine längere Reaktionszeit auf den Produktionssystemen ist kein Risiko, da sich ein Data Warehouse nicht auf die Produktionsdaten auswirkt. Basierend auf der Datenreplikation ist die Datenduplizierung in einem Data Warehouse inhärent. Die Umwandlung von Daten von Betriebssystemen in ein Data Warehouse erfolgt in vordefinierten Intervallen. Daher sind die Daten möglicherweise nicht aktuell.

NEW QUESTION: 3

The loss prevention department has purchased a new application that allows the employees to monitor the alarm systems at remote locations. However, the application fails to connect to the vendor's server and the users are unable to log in. Which of the following are the MOST likely causes of this issue? (Select TWO).

- A. Firewall rules
- B. Role-based access controls
- C. URL filtering
- D. MAC filtering
- E. Port Security

Answer: A,C

Explanation:

A URL filter is used to block URLs (websites) to prevent users accessing the website.

Firewall rules act like ACLs, and they are used to dictate what traffic can pass between the firewall and the internal network. Three possible actions can be taken based on the rule's criteria:

Block the connection

Allow the connection

Allow the connection only if it is secured

Incorrect Options:

B: Role-based Access Control is basically based on a user's job description. When a user is assigned a specific role in an environment, that user's access to objects is granted based on the required tasks of that role. Since the sales team needs to save and print reports, they would not be restricted if restrictions were role-based.

C: A MAC filter is a list of authorized wireless client interface MAC addresses that is used by a WAP to block access to all unauthorized devices.

D: Port security works at level 2 of the OSI model and allows an administrator to configure switch ports so that only certain MAC addresses can use the port.

NEW QUESTION: 4

You are developing a custom service host for a Windows Communication Foundation (WCF) service.

The service host is named MovieServiceHost.

You need to deploy the service with the custom service host in Microsoft Internet Information Services (IIS) 7.0.

What should you do?

A. Create a factory for the custom service host. Name the factory MovieServiceHostFactory. In the .svc file, add the following line. `<%@ServiceHost Service="MovieServiceHostFactory" Language="C#">`

B. Decorate the custom service host class with the following line. `[System.ServiceModel.Activation.ServiceActivationBuildProvider()]`

C. Create a factory for the custom service host. Name the factory MovieServiceHostFactory. In the web. config file, add the following attribute to the `<add>` element within the `<serviceActivations>` element. `factory="MovieServiceFactory"`

D. Make sure that service class has a default constructor. Add a public read-only property with the name ServiceHost that returns an instance of the MovieServiceHost class.

Answer: C
