NEW QUESTION: 1

Which of the following is a common use for NAT?

- A. Hiding the network portion of an IPv4 address
- B. Connecting multiple devices through a single public IP address
- C. Automatically assigning network addresses
- D. Resolving alphanumeric names to addresses

Answer: B

NEW QUESTION: 2

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains a site collection named Intranet.

You upload a custom solution to the Solution Gallery of Intranet. You discover that you cannot activate the custom solution. You need to ensure that you can activate the solution in Intranet. What should you do?

- A. From Central Administration, start the Application Registry Service.
- B. From Windows PowerShell, run `New-SPAccessServiceApplication -Name SandboxSolution Confirm:$true`.
- C. From Central Administration, start the Microsoft SharePoint Foundation Sandboxed Code Service.
- D. From Windows PowerShell, run `Start-Service -Name SPUserCodeV4`.
- E. From Windows PowerShell, run `Start-Service -Name SPAdminV4`
- F. From a command prompt, run `stsadm.exe -o execadmsvcjobs`
- G. From Central Administration, create a new service application.
- H. From Central Administration, activate the Global Web Parts feature.

Answer: D

Explanation:

Explanation/Reference:

Enable sandboxed solutions on the farm (SharePoint Foundation 2010)

Published: May 12, 2010

A sandbox is a restricted execution environment that enables programs to access only certain resources and keeps problems that occur in the sandbox from affecting the rest of the server environment. Solutions that you deploy into a sandbox, which are known as sandboxed solutions, cannot use certain computer and network resources and cannot access content outside the

site collection they are deployed in. Because sandboxed solutions cannot affect the whole server farm, they do not have to be deployed by a farm administrator. If sandboxed solutions have been enabled on at least one server in the farm, a site collection administrator can deploy solutions to a run in a sandbox on any server in the farm.

By default, sandboxed solutions are disabled. Enable sandboxed solutions on every application server on which you want to run sandboxed solutions.

For more information about sandboxed solutions, see [Sandboxed solutions overview \(SharePoint Foundation 2010\)](#).

Enable sandboxed solutions

Use the following procedure on each application server in your farm on which you want to enable sandboxed solutions.

To enable sandboxed solutions by using Central Administration

Verify that you have the following administrative credentials:

You must be a member of the Farm Administrators group on the computer that is running the SharePoint Central Administration Web site.

On the home page of the Central Administration Web site, in the System Settings section, click **Manage services on server**.

On the **Services on Server** page, in the **Server** box, select the server on which you want to enable sandboxed solutions.

In the Microsoft SharePoint Foundation **Sandboxed Code Service** row, in the **Action** column, click **Start**.

Repeat steps 3 and 4 for each server on which you want to enable sandboxed solutions.

To enable sandboxed solutions by using Windows PowerShell

Verify that you meet the following minimum requirements: See [Add-SPShellAdmin](#).

Click **Start**, and then click **All Programs**.

Click **Microsoft SharePoint 2010 Products**.

Click **SharePoint 2010 Management Shell**.

At the Windows PowerShell command prompt, type the following command:

```
Start-Service -Name SPUUserCodeV4
```

Repeat this procedure on every server on which you want to enable sandboxed solutions

NEW QUESTION: 3

Given a grid interface that extends from `Mage_Adminhtml_Block_widget_Grid`, which of the following methods could you override to allow data to be loaded from a custom data collection?

- A. `_prepareDataModel`
- B. `_prepareCollection`
- C. `_initDataModel`
- D. `_initGrid`

Answer: B
