Answer:
Explanation:

Explanation:
Box 1: Sampling
Create a sample of data
This option supports simple random sampling or stratified random sampling. This is useful if
you want to create a smaller representative sample dataset for testing.
1. Add the Partition and Sample module to your experiment in Studio, and connect the dataset.
2. Partition or sample mode: Set this to Sampling.
3. Rate of sampling. See box 2 below.
Box 2: 0
3. Rate of sampling. Random seed for sampling: Optionally, type an integer to use as a seed
value.
This option is important if you want the rows to be divided the same way every time. The
default value is 0, meaning that a starting seed is generated based on the system clock. This

can lead to slightly different results each time you run the experiment.
