Then you can go to everywhere without carrying your computers.

NEW QUESTION: 1

You have certainly implemented the configuration shown in the exhibit. After committing these changes, the community devices connected to AS1 are not able to communicate with the appropriate community devices connected to AS2. What must be done to allow these community devices to communicate?

- A. You must configure an isolation VLAN ID under the pvlan 200 on both the switches
- B. You must configure the ge 0/0/10 interface as AS1 as the pvlan trunk
- C. You must configure the ge 0/0/12 interface on both switches as pvlan trunks
- D. You must configure an isolation VLAN ID under the pvlan 200 on the AS 2 switch

Answer: C

NEW QUESTION: 2

By default, what happens to the existing connections on a firewall when a new policy is installed?

- A. Existing connections are always allowed
- B. All existing connections not allowed under the new policy will be terminated.
- C. All existing control and data connections will be kept open until the connections have ended.
- D. All existing data connections will be kept open until the connections have ended.

Answer: B

NEW QUESTION: 3

- A. Option D
- B. Option C
- C. Option A
- D. Option B

Answer: B

Explanation:

When the user creates a new EBS volume and is trying to access it for the first time it will

encounter reduced IOPS due to wiping or initiating of the block storage. To avoid this as well as achieve the best performance it is required to pre warm the EBS volume. For a blank volume attached with a Linux OS, the "dd" command is used to write to all the blocks on the device. In the command "dd if=/dev/zero of=/dev/xvdfbs=1M" the parameter "if=import file" should be set to one of the Linux virtual devices, such as /dev/zero. The "of=output file" parameter should be set to the drive that the user wishes to warm. The "bs" parameter sets the block size of the write operation; for optimal performance, this should be set to 1 MB.
