Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have a database that is denormalized. Users make frequent changes to data in a primary table.

You need to ensure that users cannot change the tables directly, and that changes made to the primary table also update any related tables.

What should you implement?

A. a table-valued function

B. the ISNULL function

C. the TRY\_CONVERT function

D. a view

E. the COALESCE function

F. a stored procedure

G. a scalar function

H. the TRY\_PARSE function

**Answer: D**

Explanation:

Using an Indexed View would allow you to keep your base data in properly normalized tables and maintain data-integrity while giving you the denormalized "view" of that data.
