NEW QUESTION: 1

A company is running three production web server reserved EC2 instances with EBS-backed root volumes.

These instances have a consistent CPU load of 80%. Traffic is being distributed to these instances by an Elastic Load Balancer. They also have production and development Multi-AZ RDS MySQL databases. What recommendation would you make to reduce cost in this environment without affecting availability of mission-critical systems? Choose the correct answer from the options given below

- A. Consider using spot instances instead of reserved EC2 instances
- B. Consider removing the Elastic Load Balancer
- C. Consider not using a Multi-AZ RDS deployment for the development database
- D. Consider using on-demand instances instead of reserved EC2 instances

Answer: C

Explanation:

Explanation

Multi-AZ databases is better for production environments rather than for development environments, so you can reduce costs by not using this for development environments Amazon RDS Multi-AZ deployments provide enhanced availability and durability for Database (DB) Instances, making them a natural fit for production database workloads. When you provision a Multi-AZ DB Instance, Amazon RDS automatically creates a primary DB Instance and synchronously replicates the data to a standby instance in a different Availability Zone (AZ). Each AZ runs on its own physically distinct, independent infrastructure, and is engineered to be highly reliable.

In case of an infrastructure failure, Amazon RDS performs an automatic failover to the standby (or to a read replica in the case of Amazon Aurora), so that you can resume database operations as soon as the failover is complete. Since the endpoint for your DB Instance remains the same after a failover, your application can resume database operation without the need for manual administrative intervention For more information on Multi-AZ RDS, please refer to the below link:

NEW QUESTION: 2

You are working as an independent computer forensics investigator and receive a call from a systems administrator for a local school system requesting your assistance. One of the students at the local high school is suspected of downloading inappropriate images from the Internet to a PC in the Computer Lab. When you arrive at the school, the systems administrator hands you a hard drive and tells you that he made a simple backup copy of the hard drive in the PC and put it on this drive and requests that you examine the drive for evidence of the suspected images. You inform him that a simple backup copy will not provide deleted files or recover file fragments. What type of copy do you need to make to ensure that the evidence found is complete and admissible in future proceedings?

- A. Full backup copy
- B. Incremental backup copy
- C. Bit-stream copy
- D. Robust copy

Answer: C

NEW QUESTION: 3

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated Scenario

You work for a company named Contoso, Ltd.

The network contains an Active Directory forest named contoso.com. A forest trust exists between contoso.com and an Active Directory forest named adatum.com.

The contoso.com forest contains the objects configured as shown in the following table.

Group 1 and Group2 contain only user accounts.

Contoso hires a new remote user named User3. User3 will work from home and will use a computer named Computer3 that runs Windows 10. Computer3 is currently in a workgroup.

An administrator named Admin1 is a member of the Domain Admins group in the contoso.com domain.

From Active Directory Users and Computers, you create an organizational unit (OU) named OU1 in the contoso.com domain, and then you create a contact named Contact1 in OU1.

An administrator of the adatum.com domain runs the Set-ADUser cmdlet to configure a user named User1 to have a user logon name of [\[email@protected\]](#)

End of repeated scenario

You need to ensure that Admin1 can convert Group1 to a global group.

What should you do?

- A. Convert Group1 to a universal security group.
- B. Add Admin1 to the Enterprise Admin group.
- C. Remove all the member from Group1.
- D. Modify the Security settings of Group1.

Answer: C

NEW QUESTION: 4

A company's ERP system users can no longer interact with the server. While troubleshooting, a

network engineer notices connections from numerous IP addresses around the globe in the firewall logs. Which of the following attacks has the organization experienced?
