Answer: C

Explanation:

IPSec is a framework of open standards that provides data confidentiality, data integrity, and data authentication between participating peers at the IP layer. IPSec can be used to protect one or more data flows between IPSec peers.

NEW QUESTION: 3

RBAC対応クラスターで、HelmとTillerを使用してAzure Kubemets

Service (AKS) にチャートを展開するためのソリューションを推奨する必要があります。

どの3つのコマンドを実行することをお勧めしますか。回答するには、適切なコマンドをコマンドのリストから回答領域に移動して、正しい順序に並べます。

Answer:

Explanation:

Explanation

Step 1: Kubectl create

You can add a service account to Tiller using the --service-account <NAME> flag while you're configuring Helm (step 2 below). As a prerequisite, you'll have to create a role binding which specifies a role and a service account name that have been set up in advance.

Example: Service account with cluster-admin role

```
$ kubectl create -f rbac-config.yaml
```

```
serviceaccount "tiller" created
```

```
clusterrolebinding "tiller" created
```

```
$ helm init --service-account tiller
```

Step 2: helm init

To deploy a basic Tiller into an AKS cluster, use the helm init command.

Step 3: helm install

To install charts with Helm, use the helm install command and specify the name of the chart to install.
