NEW QUESTION: 1

Which statement about a partition is true?

- A. A partition is a logical group of route patterns with similar accessibility characteristics.
- B. A partition is a logical group of directory numbers with similar accessibility characteristics.
- C. A partition is a group of gateways with similar accessibility characteristics.
- D. A partition is a logical group of transformation patterns with similar accessibility characteristics.

Answer: B

Explanation:

Explanation/Reference:

<http://www.cisco.com/c/en/us/support/docs/voice-unified-communications/unified-communications-manager-callmanager/13920-call-routing.html>

NEW QUESTION: 2

Your network contains an Active Directory domain named contoso.com. The domain contains three servers named Server1, Server2, and Server3.

You create a server group named ServerGroup1.

You discover the error message shown in the following exhibit. (Click the Exhibit button.)

You need to ensure that Server2 can be managed remotely by using Server Manager.

What should you do?

- A. On Server2, run the Add-Computer cmdlet.
- B. On DC1, run the Enable-PSSessionConfiguration cmdlet.
- C. On Server2 modify the membership of the Remote Management Users group.
- D. From Active Directory Users and Computers, add a computer account named Server2, and then restart Server2.

Answer: C

Explanation:

This is a security issue. To be able to access Server2 remotely through Server Manager the user need to be a member of the Remote Management Users group.

Note:

* Name: BUILTINRemote Management Users

Description: A Builtin Local group. Members of this group can access WMI resources over management protocols (such as WS-Management via the Windows Remote Management service). This applies only to WMI namespaces that grant access to the user.

* Enable-ServerManagerStandardUserRemoting

Provides one or more standard, non-Administrator users access to event, service, performance counter, and role and feature inventory data for a server that you are managing by using Server Manager.

Syntax:

Parameter Set: Default

```
Enable-ServerManagerStandardUserRemoting [-User] <String[]> [-Force] [-Confirm] [- WhatIf] [ <CommonParameters>]
```

Detailed Description

Provides one or more standard, non-Administrator users access to event, service, performance counter, and role and feature inventory data for a server that you are managing, either locally or remotely, by using Server Manager. The cmdlet must be run locally on the server that you are managing by using Server Manager. The cmdlet works by performing the following actions:

* Adds access rights for specified standard users to the rootcimv2 namespace on the local server (for access to role and feature inventory information).

* Adds specified standard users to required user groups (Remote Management Users, Event Log Readers, and Performance Log Readers) that allow remote access to event and performance counter logs on the managed server.

Changes access rights in the Service Control Manager to allow specified standard users remote access to the status of services on the managed server.

Incorrect:

Not A: the Enable-PSSessionConfiguration. This is an advanced cmdlet that is designed to be used by system administrators to manage customized session configurations for their users.

Reference: Enable-ServerManagerStandardUserRemoting

NEW QUESTION: 3

HOTSPOT

Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2. Server1 has the Network Policy Server server role installed. Server2 has the DHCP Server server role installed. Both servers run Windows Server 2012 R2.

You are configuring Network Access Protection (NAP) to use DHCP enforcement.

You configure a DHCP scope as shown in the exhibit. (Click the Exhibit button.)

You need to ensure that non-compliant NAP clients receive different DHCP options than compliant NAP clients.

What should you configure on each server?

To answer, select the appropriate options for each server in the answer area.

Answer:
