### **NEW QUESTION: 1**

Sie haben einen Server mit dem Namen Server1, auf dem Windows Server 2012 R2 ausgeführt wird. Der Speicher auf Server1 ist wie in der folgenden Tabelle gezeigt konfiguriert.

Sie planen, die Datendeduplizierung auf Server1 zu implementieren. Sie müssen ermitteln, auf welchen Laufwerken Sie die Datendeduplizierung aktivieren können. Welche drei Laufwerke sollten Sie identifizieren? (Jede richtige Antwort stellt einen Teil der Lösung dar. Wählen Sie drei.)

- A. F
- B. D
- C. E
- D. G
- E. C

**Answer: A,B,D**

Explanation:

Erläuterung

Volumes, die für die Deduplizierung in Frage kommen, müssen den folgenden Anforderungen entsprechen:

- \* Darf kein System- oder Startvolume sein. (kein)
- \* Kann als Master Boot Record (MBR) oder als GUID Partition Table (GPT) partitioniert werden und muss mit dem NTFS-Dateisystem formatiert werden. (nicht C)
- \* Kann sich in gemeinsam genutztem Speicher befinden, z. B. in einem Speicher, der einen Fibre Channel oder ein SAS-Array verwendet, oder wenn ein iSCSI-SAN und Windows-Failover-Clustering vollständig unterstützt werden.
- \* Verlassen Sie sich nicht auf Cluster Shared Volumes (CSVs). Sie können auf Daten zugreifen, wenn ein für die Deduplizierung aktiviertes Volume in eine CSV-Datei konvertiert wird, aber Sie können Dateien für die Deduplizierung nicht weiter verarbeiten.
- \* Verlassen Sie sich nicht auf das Microsoft Resilient File System (ReFS).
- \* Muss dem Betriebssystem als nicht austauschbare Laufwerke ausgesetzt sein.

Remotzugeordnete Laufwerke werden nicht unterstützt.

During an examination, the nurse notes that an infant has diaper rash on the convex surfaces of his buttocks, inner thighs, and scrotum. Which of the following nursing interventions will be most effective in resolving the condition?

- A. Cleaning the inflamed area thoroughly with disposable wet "wipes" at each diaper change
- B. Using talcum powder on the inflamed areas to promote drying
- C. Removing the diaper entirely for extended periods of time
- D. Coating the inflamed areas with zinc oxide

### **NEW QUESTION: 4**

A user has created a launch configuration for Auto Scaling where CloudWatch detailed monitoring is disabled.

The user wants to now enable detailed monitoring. How can the user achieve this?

- A. Update the Launch config with CLI to set InstanceMonitoringDisabled = false
- B. Update the Launch config with CLI to set InstanceMonitoring.Enabled = true
- C. Create a new Launch Config with detail monitoring enabled and update the Auto Scaling group
- D. The user should change the Auto Scaling group from the AWS console to enable detailed monitoring

**Answer: C**

Explanation:

Explanation

CloudWatch is used to monitor AWS as well as the custom services. To enable detailed instance monitoring for a new Auto Scaling group, the user does not need to take any extra steps. When the user creates the AutoScaling launch config as the first step for creating an Auto Scaling group, each launch configuration contains a flag named InstanceMonitoring.Enabled. The default value of this flag is true. When the user has created a launch configuration with InstanceMonitoring.Enabled = false it will involve multiple steps to enable detail monitoring. The steps are:

Create a new Launch config with detailed monitoring enabled  
Update the Auto Scaling group with a new launch config  
Enable detail monitoring on each EC2 instance
