Microsoft Azure SQLデータベースインスタンスを管理します。

トランザクションを使用する多数のストアードプロシージャをトラブルシューティングしています。

* p_ModifyCustomerは、データベース内の顧客レコードを変更します。

これらのレコードを使用するプロセスは、トランザクションの開始時に存在するレコードのコピーを受け取る必要があり、プロシージャはこれらのプロセスをブロックしてはなりません。

* p_GetOrdersは、顧客の注文を取り出すために使用されます。

トランザクションが実行されている間、他のプロセスは同じデータを読み取ることができず、トランザクションが完了するまで他のトランザクションがデータを変更できません。

* p_ShipOrdersは出荷基準にバッチ注文を1日1回実行します。

このトランザクションが実行されている間、変更される注文の範囲にデータを挿入する他のトランザクションは許されません。

ストアドプロシージャごとに適切なトランザクション分離レベルを選択する必要があります。

トランザクションは、最高レベルの並行性とパフォーマンスを提供しながら、必要性を満たす必要があります。

Answer:

Explanation:

Explanation:

Box 1: READ_COMMITTED

READ COMMITTED specifies that statements cannot read data that has been modified but not committed by other transactions. This prevents dirty reads. Data can be changed by other transactions between individual statements within the current transaction, resulting in nonrepeatable reads or phantom data. This option is the SQL Server default.

The behavior of READ COMMITTED depends on the setting of the

READ_COMMITTED_SNAPSHOT database option Box 2: REPEATABLE_READ:

REPEATABLE_READ specifies that statements cannot read data that has been modified but not yet committed by other transactions and that no other transactions can modify data that has been read by the current transaction until the current transaction completes.

Shared locks are placed on all data read by each statement in the transaction and are held until the transaction completes. This prevents other transactions from modifying any rows that have been read by the current transaction.

Box 3: SERIALIZABLE

SERIALIZABLE Specifies the following:

Statements cannot read data that has been modified but not yet committed by other transactions.

No other transactions can modify data that has been read by the current transaction until the current transaction completes.

Other transactions cannot insert new rows with key values that would fall in the range of keys read by any statements in the current transaction until the current transaction completes.

Incorrect Answers:

Not READ:UNCOMMITTED:

Transactions running at the READ UNCOMMITTED level do not issue shared locks to prevent other transactions from modifying data read by the current transaction. READ UNCOMMITTED transactions are also not blocked by exclusive locks that would prevent the current transaction from reading rows that have been modified but not committed by other transactions. When this option is set, it is possible to read uncommitted modifications, which are called dirty reads.
