NEW QUESTION: 1

What are some of the characteristics of next-generation firewall and next generation IPS logging capabilities? (Select all that apply.)

- A.** With next-generation firewalls, you can monitor events for traffic that does not conform with your access control policies. Access control policies allow you to specify, inspect, and log the traffic that can traverse your network. An access control policy determines how the system handles traffic on your network.
- B.** Next-generation firewalls and next-generation IPSs help you identify and mitigate the effects of malware. The FMC file control, network file trajectory, and Advanced Malware Protection (AMP) can detect, track, capture, analyze, log, and optionally block the transmission of files, including malware files and nested files inside archive files.
- C.** AMP is supported by Cisco next-generation firewalls, but not by IPS devices.
- D.** With next-generation firewalls, you can only monitor malware activity and not access control policies.

Answer: A,B

NEW QUESTION: 2

Which statement describes the Maximum Serving Count service parameter of the Cisco TFTP service on Cisco Unified Communications Manager?

- A.** It specifies the maximum file counts, in cache as well as in disk, that are supported by the Cisco TFTP service.
- B.** It specifies the maximum number of files in the TFTP server disk storage.
- C.** It specifies the maximum number of TFTP client requests to accept and to serve files at a given time.
- D.** It specifies the maximum file support by the Cisco TFTP service.
- E.** It specifies the maximum number of TFTP client requests to accept and to serve files in a 120-minute window.

Answer: C

Explanation:

This parameter specifies the maximum number of client requests to accept and to serve files at a time. Specify a low value if you are serving files over a low bandwidth connection. You can set it to a higher number if you are serving small files over a large bandwidth connection and when CPU resources are available, such as when no other services run on the TFTP server. Use the default value if the TFTP service is run along with other Cisco CallManager services on the same server. Use the following suggested values for a dedicated TFTP server: 1500 for a single-processor system and 3000 for a dual-processor system. If the dual-processor system is running Windows 2000 Advanced Server, the serving count can be up to 5000. This is a required field.
Default: 200.
Minimum: 1.
Maximum: 5000.

NEW QUESTION: 3

In the example dataset, where does it state to limit the results to a specific time period?

```
SELECT dstip as domain, count(*) as session
FROM $log
WHERE $filter and dstip is not null
GROUP BY dstip
ORDER BY session desc
LIMIT 7
```

OFFSET 1

A. count(*)

B. LIMIT 7

C. \$filter

D. There is no time period set in this query

Answer: C

NEW QUESTION: 4

Which of the following statements are true about queuing messages?

A. The client application should save the message identifier returned after adding a message to a queue for later use.

B. Storage queue messages have no size restrictions. The reason for using smaller message sizes is to increase throughput to the queue.

C. Storage queue messages are limited to 64 K

D. Storage queue messages are durable.

Answer: C
