What you should do only is click our purchase button, then DES-DD23 Accurate Answers our Specialist - Implementation Engineer, PowerProtect DD Exam pdf vce will solve all your problems about the examination and generate golden opportunities for you.

### NEW QUESTION: 1

Which IPS mode provides the maximum number of actions?

- A. failover
- B. span
- C. promiscuous
- D. inline
- E. bypass

**Answer: D**

Explanation:

The first option is to put a sensor inline with the traffic, which just means that any traffic going through your network is forced to go in one physical or logical port on the sensor.

Because the sensor is inline with the network, and because it can drop a packet and deny that packet from ever reaching its final destination (because it might cause harm to that destination), the sensor has in fact just prevented that attack from being carried out. That is the concept behind intrusion prevention systems (IPS).

Whenever you hear IPS mentioned, you immediately know that the sensor is inline with the traffic, which makes it possible to prevent the attack from making it further into the network.
