Explanation:

Backing Up a Database in NOARCHIVELOG Mode

If a database runs in NOARCHIVELOG mode, then the only valid database backup is a consistent backup.

For the backup to be consistent, the database must be mounted after a consistent shutdown.

No recovery is required after restoring the backup.

To make a consistent database backup:

1. Start RMAN and connect to a target database.

2. Shut down the database consistently and then mount it.

For example, enter the following commands to guarantee that the database is in a consistent state for a backup:

```
RMAN> SHUTDOWN IMMEDIATE;
```

```
RMAN> STARTUP FORCE DBA;
```

```
RMAN> SHUTDOWN IMMEDIATE;
```

```
RMAN> STARTUP MOUNT;
```

3. Run the BACKUP DATABASE command.

For example, enter the following command at the RMAN prompt to back up the database to the default backup device:

```
RMAN> BACKUP DATABASE;
```

The following variation of the command creates image copy backups of all data files in the database:

```
RMAN> BACKUP AS COPY DATABASE;
```

4. Open the database and resume normal operations.

The following command opens the database:

```
RMAN> ALTER DATABASE OPEN;
```
