becomes extremely important for a user to setup a proper security mechanism on the EC2 instances. A few of the security measures are listed below:
. Always keep the OS updated with the latest patch
. Always create separate users with in OS if they need to connect with the EC2 instances, create their keys and disable their password
. Create a procedure using which the admin can revoke the access of the user when the business work on the EC2 instance is completed
. Lock down unnecessary ports
. Audit any proprietary applications that the user may be running on the EC2 instance . Provide temporary escalated privileges, such as sudo for users who need to perform occasional privileged tasks IAM is useful when users are required to work with AWS resources and actions, such as launching an instance. It is not useful in this case because it does not manage who can connect via RDP or SSH with an instance.
