- F. The FMC is pointing to an incorrect AMP cloud address.

**Answer: A,D**

**NEW QUESTION: 4**

- A. Option B
- B. Option C
- C. Option A

**Answer: C**

Explanation:

Explanation

Denial of service refers to willful attempts to disrupt legitimate users from getting access to the resources they

intend to. Although no complete solution exists, administrators can do specific things to protect the network

from a DoS attack and to lessen its effects and prevent a would-be attacker from using a system as a source of

an attack directed at other systems. These mitigation techniques include filtering based on bogus source IP

addresses trying to come into the networks and vice versa. Unicast reverse path verification is one way to

assist with this, as are access lists. Unicast reverse path verification looks at the source IP address as it comes

into an interface, and then looks at the routing table. If the source address seen would not be reachable out of

the same interface it is coming in on, the packet is considered bad, potentially spoofed, and is dropped.
