- C. Option D
- D. Option C

Answer: B

NEW QUESTION: 2

Which three approaches can be used while migrating from an IPv4 addressing scheme to an IPv6 scheme (choose three)

- A. enable dual-stack routing
- B. use proxying and translation (NAT-PT) to translate IPv6 packets into IPv4 packets
- C. configure IPv6 directly
- D. use DHCPv6 to map IPv4 addresses to IPv6 addresses
- E. configuring IPv4 tunnels between IPv6 islands
- F. static mapping of IPv4 address to IPv6 addresses

Answer: A,B,E

Explanation:

Connecting IPv6 islands with tunnels

An IPv6 island is a network made of IPv6 links directly connected by IPv6 routers. In the early days of IPv6 deployment, there are many IPv6 islands. IPv6 in IPv4 tunnels are used to connect those islands together. In each island, one (or more) dual stack routers are designated to encapsulate and decapsulate IPv6 packets within IPv4 packets. Different mechanisms have been developed to manage tunnels: automatic tunnels³, configured tunnels³, tunnel brokers³, 6over4³, 6to4³,...

<http://www.petri.co.il/ipv6-transition.htm>

Network Address Translation - Protocol Translation (NAT-PT) The NAT-PT method enables the ability to either statically or dynamically configure a translation of a IPv4 network address into an IPv6 network address and vice versa. For those familiar with more typically NAT implementations, the operation is very similar but includes a protocol translation function. NAT-PT also ties in an Application Layer Gateway (ALG) functionality that converts Domain Name System (DNS) mappings between protocols.

Dual Stack

The simplest approach when transitioning to IPv6 is to run IPv6 on all of the devices that are currently running IPv4. If this is something that is possible within the organizational network, it is very easy to implement.

However, for many organizations, IPv6 is not supported on all of the IPv4 devices; in these situations other methods must be considered.

NEW QUESTION: 3

Ein Mitglied des Projektteams beschwerte sich beim Projektmanager, dass er sich nicht sicher sei, ob das neueste Anforderungsdokument vorliegt, da es vor etwa einer Woche per E-Mail an ihn gesendet wurde. Sie erwähnten, dass sie in der Vergangenheit mehr als 20 Stunden an einem Dokument gearbeitet hatten, um später herauszufinden, dass ein anderes Teammitglied dasselbe Dokument bereits aktualisiert hatte, ihnen jedoch nicht die neuesten Überarbeitungen zugesandt hatte.

Was sollte der Projektmanager tun, um diese Situation in Zukunft zu vermeiden?

- A.** Implementieren Sie ein Projektmanagement-Informationssystem (PMIS).
- B.** Fördern Sie eine bessere Teamkommunikation, indem Sie die Teammitglieder näher beieinander positionieren.
- C.** Verhindern Sie, dass Teammitglieder die Anforderungsdokumente per E-Mail senden
- D.** Aktualisieren Sie den Kommunikationsverwaltungsplan, um die korrekte Bereitstellung der neuesten Version sicherzustellen

Answer: A
