NEW QUESTION: 1

An organization implements single sign-on (SSO) for use with Office 365 services. You install an Active Directory Federation Services (AD FS) proxy server.

Users report that they are unable to authenticate. You launch the Event Viewer and view the event information shown in the following screen shot:

You need to ensure that users can authenticate to Office 365.

What should you do?

- A.** Verify network connectivity between the Federation Service Proxy and federation server.
- B.** Re-install the Secure Sockets Layer (SSL) certificate for the federation service.
- C.** Verify the federation server proxy is trusted by the federation service.
- D.** Re-enter the credentials used to establish the trust.

Answer: D

Explanation:

Explanation

The exhibit indicates that the federation server proxy could not establish a trust with the Federation Service.

Possible causes for this problem are:

* The credentials that are used to establish the trust between the federation server proxy and the Federation Service are not valid, or the Federation Service cannot be reached.

* The federation server proxy trust was revoked.

* The federation server proxy has been inactive for a long period of time (such as 30 days or more).

Possible solutions are:

* Ensure that the credentials that are being used to establish a trust between the federation

server proxy and the Federation Service are valid, and that the Federation Service can be reached.

* Run the AD FS 2.0 Proxy Configuration Wizard again to renew trust with the Federation Service.

NEW QUESTION: 2

How can a FortiMail administrator retrieve email account information from an LDAP Server instead of configuring this data manually on the unit?

- A.** Configure the LDAP profile sections "User query options" and "Authentication" then associate the profile to the domain that is locally configured.
- B.** This operation is not supported. The administrator has to configure the user email accounts manually.
- C.** Configure the LDAP profile sections "User query options" and "Authentication" and associate the profile to an incoming Recipient-based policy.
- D.** Configure the LDAP profile sections "Authentication" and "User Alias Options" then associate the profile to the domain that is locally configured.

Answer: A

NEW QUESTION: 3

DRAG DROP

Your network contains an Active Directory forest. The forest contains a single domain named contoso.com.

The forest contains two Active Directory sites named Main and Branch1. The sites connect to each other by using a site link named Main-Branch1. There are no other site links.

Each site contains several domain controllers. All domain controllers run Windows Server 2012 R2. Your company plans to open a new branch site named Branch2. The new site will have a WAN link that connects to the Main site only. The site will contain two domain controllers that run Windows Server 2012 R2.

You need to create a new site and a new site link for Branch2. The solution must ensure that the domain controllers in Branch2 only replicate to the domain controllers in Branch1 if all of the domain controllers in Main are unavailable.

Which three actions should you perform?

To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order.
