offices.

Content management in System Center 2012 Configuration Manager provides the tools for you to manage content files for applications, packages, software updates, and operating system deployment.

Configuration Manager uses distribution points to store files required for software to run on client computers. These distribution points function as distribution centers for the content files and let users download and run the software. Clients must have access to at least one distribution point from which they can download the files.

NEW QUESTION: 3

What is the main characteristic of a bastion host?

A. It is located on the internal network.

B. It is a firewall.

C. It does packet filtering.

D. It is a hardened computer implementation

Answer: D

Explanation:

Explanation/Reference:

A bastion host is a special purpose computer on a network specifically designed and configured to withstand attack. The computer hosts a single application, for example a proxy server, and all other services are removed or limited to reduce the threat to the computer. It is hardened in this manner primarily due to its location and purpose, which is either on the outside of the firewall or in the DMZ and usually involves access from untrusted networks or computers.
