### **NEW QUESTION: 1**

You plan to move services from your on-premises network to Azure.

You identify several virtual machines that you believe can be hosted in Azure. The virtual machines are shown in the following table.

Which two virtual machines can you access by using Azure migrate? Each correct answer presents a complete solution.

NOTE:Each correct selection is worth one point.

- A. Sea-DC01
- B. Hou-NW01
- C. Sea-CA01
- D. BOS-DB01
- E. NYC-FS01

**Answer: D,E**

Explanation:

Explanation

Azure Migrate provides a centralized hub to assess and migrate to Azure on-premises servers, infrastructure, applications, and data. It provides the following:

Unified migration platform: A single portal to start, run, and track your migration to Azure.

Range of tools: A range of tools for assessment and migration. Azure Migrate tools include Server Assessment and Azure Migrate: Server Migration. Azure Migrate also integrates with other Azure services and tools, and with independent software vendor (ISV) offerings.

Assessment and migration: In the Azure Migrate hub, you can assess and migrate:

Servers: Assess on-premises servers and migrate them to Azure virtual machines or Azure VMware Solution (AVS) (Preview).

Databases: Assess on-premises databases and migrate them to Azure SQL Database or to SQL Managed Instance.

Web applications: Assess on-premises web applications and migrate them to Azure App Service by using the Azure App Service Migration Assistant.

Virtual desktops: Assess your on-premises virtual desktop infrastructure (VDI) and migrate it to Windows Virtual Desktop in Azure.

Data: Migrate large amounts of data to Azure quickly and cost-effectively using Azure Data Box products.

Based on this information let's analyze each option:

NYC-FS01 : Its role "Server" fall under above categories. Hence it can be accessed by using Azure migrate.

BOS-DB01 : Its role "server" fall under above categories. Hence it can be accessed by using Azure migrate.

Sea-CA01 : Its role "CA" does not fall under above categories. Hence it can not be accessed by using Azure migrate.

Hou-NW01 : Its role "DNS" does not fall under above categories. Hence it can not be accessed by using Azure migrate.

Sea-DC01 : Its role "DC" does not fall under above categories. Hence it can not be accessed by using Azure migrate.

### **NEW QUESTION: 2**

NO: 16 The public key infrastructure debugs are generated on a Cisco IOS VPN router for a failed certification validation on an incoming connection from an IP phone client. Which option is a possible solution for this problem?

Refer to the exhibit.

**A.** Define a Certification Revocation List in the IP phone certificate.

**B.** Define a matching Certification Revocation List on the Cisco Unified Communications Manager.

**C.** Disable revocation check for the trustpoint.

**D.** Define a matching Certification Revocation List on the Cisco IOS VPN router.

**E.** Define an enrollment URL for the trustpoint.

**Answer: C**

Explanation:

When a certificate is issued, it is valid for a fixed period of time. Sometimes a CA revokes a certificate before this time period expires; for example, due to security concerns or a change of name or association. CAs periodically issues a signed list of revoked certificates. Enabling revocation checking forces the IOS router to check that the CA has not revoked a certificate every time it uses that certificate for authentication. When you enable revocation checking during the PKI certificate validation process, the router checks certificate revocation status. It can use either CRL checking or Online Certificate Status Protocol or both, with the second method you set in effect only when the first method returns an error, for example, that the server is unavailable. With CRL checking, the router retrieves, parses, and caches Certificate Revocation Lists, which provide a complete list of revoked certificates. OCSP offers a more scalable method of checking revocation status in that it localizes certificate status on a Validation Authority, which it queries for the status of a specific certificate.
