Answer: B,D

Explanation:

6.2 Study Guide page 305

verify and correct parts of the device manager databases, including:

- inconsistent device-to-group and group-to-ADOM memberships
- unregistered, registered, and deleted device states
- device lock statuses
- duplicate VDOM entries

NEW QUESTION: 3

Your company has a single Active Directory forest that has an Active Directory domain named na.contoso.com.

A server named Server1 runs the DNS Server server role. You notice stale resource records in the na.contoso.com zone. You have enabled DNS scavenging on Server1. Three weeks later, you notice that the stale resource records remain in na.contoso.com. You need to ensure that the stale resource records are removed from na.contoso.com.

What should you do?

- A. Stop and restart the DNS Server service on Server1.
- B. Enable DNS scavenging on the na.contoso.com zone.
- C. Run the dnscmd Server1 /AgeAllRecords command on Server1.
- D. Run the dnscmd Server1 /StartScavenging command on Server1.

Answer: B

NEW QUESTION: 4

Which NetFlow component is applied to an interface and collects information about flows?

- A. flow exporter
- B. flow monitor
- C. flow collector
- D. flow sampler

Answer: B

Explanation:

Explanation/Reference:

Explanation:

Flow monitors are the NetFlow component that is applied to interfaces to perform network traffic monitoring. Flow monitors consist of a record and a cache. You add the record to the flow monitor after you create the flow monitor. The flow monitor cache is automatically created at the time the flow monitor is applied to the first interface. Flow data is collected from the network traffic during the monitoring process based on the key and nonkey fields in the record, which is configured for the flow monitor and stored in the flow monitor cache.
