NEW QUESTION: 3

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to

external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab.

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below. To enter your password, place your cursor in the Enter password box and click on the password below.

Azure Username: [\[email protected\]](#)

Azure Password: Nq9Md6+!Bj

If the Azure portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 11234828

You need to ensure that all the virtual machines in the resource groups are available in one region during platform updates.

What should you modify?

NOTE: To answer this question, sign in to the Azure portal and explore the Azure resource groups.

- A. the number of fault domains
- B. the number of update domains
- C. the number of virtual machines in the availability set
- D. the replication settings of the storage account

Answer: B

Explanation:

Explanation

Update Domain

When you created VMs on the IaaS service model, then Microsoft is not responsible for automatic system updates. You have complete control over that. The planned maintenance event comes in this phase, where we planned for server or virtual machine updating. Sometimes we need to update some own software, or some updates come from Microsoft due to performance, security, etc. it is not automatically updated your virtual machine, then we need to plan it for updates. So how is that done without taking your service offline? Update Domains.

NEW QUESTION: 4

Which of the following statements are true about the XACML standard and architecture?

- A. The Policy Information Point (PIP) provides information such as user attributes or environmental data that may be used to make access control decisions.

- B. SAML assertions can be used to carry XACML authorization decisions.
- C. The Policy Enforcement Point (PEP) is where permit / deny access decisions are made.
- D. XACML defines a TCP protocol used to communicate messages between Policy Enforcement Points.
- E. XACML defines an XML schema used to represent rules for access control.

Answer: A,B,C,E

Explanation:

A: PEP - Policy Enforcement Point, where permit/deny access decisions are enforced.

B: PIP - Policy Information Point, where information can be retrieved to evaluate policy conditions. For example, a user's role or time of day may be needed by the PDP to make a policy decision.

C: eXtensible Access Control Markup Language (XACML) provides a standard way to represent access control policy information using XML. XAMCL defines access control policies in terms of rules, which in turn are defined to include a target, an effect, and a set of conditions. XACML defines an XML schema used to represent rule

E: The SAML 2.0 profile of XACML 2.0 defines SAML assertions used to carry policies, policy queries and responses, authorization decisions, authorization query decisions and responses, and attribute assertions. In this way SAML authentication, attribute, and authorization assertions are incorporated into the security framework to complement XACML.
