NEW QUESTION: 1

An administrator has configured View with a single Connection Server and is adding a Replica Connection Server. After installing the Replica Connection Server the following symptoms are observed:

New pools disappear after creation or do not appear.

Provisioning tasks do not start and no activity is observed in vCenter.

Both Connection Servers are visible under the Servers page in View Administrator on the Replica Connection Server.

Only the original Connection Server is visible under the Servers page in View Administrator on the original Connection Server.

What is the likely source of this problem?

A. Not enough time has passed for replication to complete.

B. DNS entries for the Connection Servers are missing or incorrect.

C. Not enough memory is available to the View Connection Server to complete the provisioning tasks.

D. View Composer must be restarted after a Replica Connection Server is added.
