We can claim that if you study with our MB-500 learning guide for 20 to 30 hours, then you are bound to pass the exam with confidence.

NEW QUESTION: 1
Your API requires the ability to stay online during AWS regional failures. Your API does not store any state, it only aggregates data from other sources - you do not have a database. What is a simple but effective way to achieve this uptime goal?
A. Use a CloudFront distribution to serve up your API. Even if the region your API is in goes down, the edge locations CloudFront uses will be fine.
B. UseanELBand a cross-zone ELB deployment to create redundancy across datacenters. Even if a region fails, the other AZ will stay online.
C. Create a Route53 Weighted Round Robin record, and if one region goes down, have that region redirect to the other region.
D. Create a Route53 Latency Based Routing Record with Failover and point it to two identical deployments of your stateless API in two different regions. Make sure both regions use Auto Scaling Groups behind ELBs.
Answer: D
Explanation:
Explanation
Failover routing lets you route traffic to a resource when the resource is healthy or to a different resource when the first resource is unhealthy. The primary and secondary resource record sets can route traffic to anything from an Amazon S3 bucket that is configured as a website to a complex tree of records.
For more information on Route53 Failover Routing, please visit the below URL:
