### NEW QUESTION: 1

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You plan to store delimited text files in an Azure Data Lake Storage account that will be organized into department folders.

You need to configure data access so that users see only the files in their respective department folder.

Solution: From the storage account, you disable a hierarchical namespace, and you use access control lists (ACLs).

Does this meet the goal?

A. Yes

B. No

**Answer: A**

Explanation:

Explanation

Azure Data Lake Storage implements an access control model that derives from HDFS, which in turn derives from the POSIX access control model.

Blob container ACLs does not support the hierarchical namespace, so it must be disabled.

### NEW QUESTION: 2

A child possibly has pinworm infestation because he reported that he first felt:

A. anal itching

B. maculopapular rash

C. scaly skin patches

D. loose bowel movement

**Answer: A**

Explanation:

Explanation: With enterobiasis, the adult worm lays her eggs around the anal opening, producing an irritation and thus an itch.

### **NEW QUESTION: 3**

Which items are included in a Firebox backup image? (Select four.)

- A. Configuration file
- B. Log file
- C. Support snapshot
- D. Feature keys
- E. Fireware OS
- F. Certificates

**Answer: A,D,E,F**

Explanation:

A Firebox backup image is a saved copy of the working image from the Firebox flash disk. The backup image includes the Firebox appliance software, configuration file, licenses, and certificates.

When you purchase an option for your Firebox, you add a new feature key to your configuration file.
