NEW QUESTION: 1

You are developing an ASP.NET MVC application that will be deployed on a web farm. Passwords must be stored in the web.config file and must not be readable or in a format that is easily decodable

You need to encrypt the passwords that are stored in the web.config file.

Which command-line tool should you use?

- A. Ngen.exe
- B. Aspnet_merge.exe
- C. EdmGen.exe
- D. Aspnet_regiis.exe

Answer: D

Explanation:

Explanation/Reference:

References: [http://msdn.microsoft.com/en-us/library/zhhddkxy\(v=vs.100\).aspx](http://msdn.microsoft.com/en-us/library/zhhddkxy(v=vs.100).aspx)

NEW QUESTION: 2

A network administrator is responsible for securing applications against external attacks. Every month, the underlying operating system is updated. There is no process in place for other software updates.

Which of the following processes could MOST effectively mitigate these risks?

- A. Application firewall review
- B. Application change management
- C. Application patch management
- D. Application hardening

Answer: C

Explanation:

Explanation/Reference:

Explanation:

The question states that operating system updates are applied but other software updates don't.

The 'other software' in this case would be applications. Software updates includes functionality updates and more importantly security updates. The process of applying software updates or 'patches' to applications is known as 'application patch management'. Application patch management is an effective way of mitigating security risks associated with software applications.

NEW QUESTION: 3

Which of the following is not an input into organizational planning?

- A. Recruitment practices
- B. Staffing requirements
- C. Constraints
- D. Project interfaces

Answer: A
