Make sure you're buying the best product, Errandsolutions's top PSD dumps are meant to deliver you the best knowledge on Scrum Certification certification syllabus contents.

To many exam candidates who yearn for the certificate, our PSD practice materials can satisfy them smoothly.

NEW QUESTION: 1

An administrator discovers that many users have used their same passwords for years even though the network requires that the passwords be changed every six weeks. Which of the following, when used together, would BEST prevent users from reusing their existing password? (Select TWO).

- A. Length of password
- B. Non-dictionary words
- C. Password history
- D. Minimum password age
- E. Password expiration
- F. Password complexity

Answer: C,D

Explanation:

In this question, users are forced to change their passwords every six weeks. However, they are able to change their password and enter the same password as the new password.

Password history determines the number of previous passwords that cannot be used when a user changes his password. For example, a password history value of 5 would disallow a user from changing his password to any of his previous 5 passwords.

When a user is forced to change his password due to a maximum password age period expiring, (the question states that the network requires that the passwords be changed every six weeks) he could change his password to a previously used password. Or if a password history value of 5 is configured, the user could change his password six times to cycle back round to his original password. This is where the minimum password age comes in. This is the period that a password must be used for. For example, a minimum password age of 30 would determine that when a user changes his password, he must continue to use the same password for at least 30 days.

NEW QUESTION: 2

Your company has factories in 10 countries. Each factory contains several thousand IoT devices.

The devices present status and trending data on a dashboard.

You need to ingest the data from the IoT devices into a data warehouse.

Which two Microsoft Azure technologies should you use? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Azure Batch
- B. an Azure HDInsight cluster
- C. Azure Data Lake
- D. Azure Stream Analytics
- E. Azure Data Factory

Answer: B,C

Explanation:

Explanation

With Azure Data Lake Store (ADLS) serving as the hyper-scale storage layer and HDInsight serving as the Hadoop-based compute engine services. It can be used for prepping large amounts of data for insertion into a Data Warehouse References:
